moduline SYSTEM

Moduline

Tailored automated solution for any production process

Our new Moduline System is designed for the customer looking to increase business profits by automating their production process. Designed specifically to meet any automation need while keeping your production and payback concerns in mind. The Moduline System's unique design enables you to select multiple automation options regardless of your production demands.

Moduline Seam Types:

moduline SYSTEM

Moduline Multiple Roll

Save space and weld multiple layers simultaneously

The Moduline Multiple Roll System is used for the production of large covers, truck tarps, and tarpaulins. This automated system welds two large rolls together. The two unwinds and single welding station with rewind increases efficiency by reducing the number of welds taking place outside of the factory or in the field. The film, when unfolded, spans over 200ft.

Moduline Multiple Roll System Seam Types:

I4500W SYSTEM

I4500W Series

Horizontal and/or vertical webbing

The I4500W Series is designed to weld all narrow webbings as well as wide reinforcement strips. This recipe driven curtain producer will enable your operator to easily finish your vertical webbing and vertical seams effortlessly. All webbings are pre-fed, pre-cut and precisely positioned with no measuring.

I4500W Seam Types:

Automate your business...Accelerate your profits!
