

SYNC Service for AASHTOWare Project™

SECURELY TRANSFER DATA WITH A SINGLE CONNECTION

Store + Transfer Offsite Data in a Centralized Hub

Using Info Tech, Inc.'s mobile applications, agencies can easily store and transfer data from the field to the agency's system. Several security measures protect the agency's data during transfer by encrypting all data in transit and at rest.

Increase Field Staff Productivity

Without the need to return to the office to enter data, field personnel can capture and enter more data in a shorter period of time. Daily report information, like item progress, contractor workforce, photos, and site conditions can be entered directly from the job site. Sample and test data can also be entered to eliminate data re-entry errors and expedite material acceptance for contractor payment.

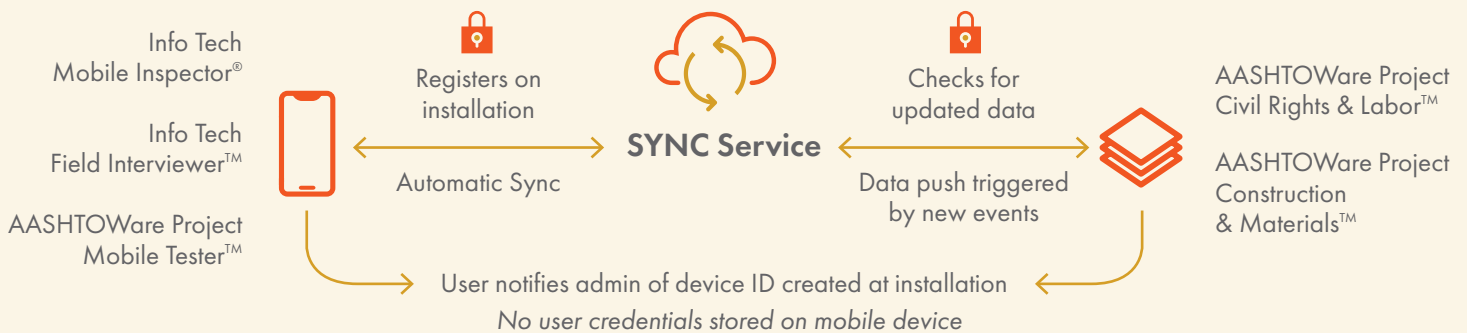

Interface with Third Party Applications

SYNC Service for AASHTOWare Project™ can securely connect both products and mobile devices, interfacing with third-party construction management systems and custom applications that may be specific to your agency's needs, such as a document management service.

DATA SYNCHRONIZATION

Data is encrypted using Amazon Web Services (AWS) S3

To learn more about the AASHTOWare Project SYNC service and the unified database, contact AASHTO or the AASHTOWare contractor:
