

CAREER PROFILE

I'm an experienced professional with over 10 years of expertise in Software Testing and Quality Assurance. I hold a degree in Information Systems and an MBA in Big Data and Business Analytics.

Throughout my career, I've developed strong skills in planning, developing, and executing manual and automated tests across all layers of software using various programming languages and tools. Additionally, I have experience in conducting non-functional tests such as load tests.

EXPERIENCES

QA Engineer Jun 2022 - Apr 2023  
CI&T

I led the software test lifecycle strategy of a financial application in the fund of funds market for one of Brazil's largest banks. As a consultant, I provided expertise in testing practices and successfully developed an automated test framework. By collaborating closely with the UX team, we enhanced application flows, ensuring a seamless user experience.

- Refactored an entire end-to-end test project using Cypress and Javascript. Successfully automated test cases, resulting in improved efficiency and reduced time for regression testing.
- Maintained and improved an end-to-end test project with Selenium, .NET Core, and SpecFlow. Streamlined test scenarios and contributed to the continuous improvement of test coverage.
- Implemented tests in CI tools AWS CodeBuild and GitHub Actions, enabling seamless integration and automated testing in the development process.
- In addition, I authored BDD documentation to enhance collaboration and communication between development and testing teams.

Software Engineer in Test / QA Engineer Mar 2018 - Jun 2022  
VTEX

By prioritizing testing needs and promoting a robust testing culture, I improved code quality, product functionality, and team efficiency. I mentored teammates on testing best practices and facilitated knowledge-sharing sessions, and also:

- Led load tests on an e-commerce platform, ensuring smooth operation during high-demand periods.
- Implemented testing culture and processes within the team, following agile methodology.
- Created test environments and defined comprehensive testing strategies.
- Developed automated testing scenarios for API and UI integrating into the CI/CD pipeline for fast regression testing.
- Wrote unit tests in .NET and integration tests using Postman/Newman.
- Conducted UI testing with Cypress and utilized AWS services.

Product Owner / QA Engineer Feb 2016 - Mar 2018  
deviceLab

In this role, I successfully combined my managerial skills with technical expertise, contributing to efficient product management and the implementation of best practices in mobile software testing.

- Worked in both managerial and technical areas, focusing on product management, consulting, training, and best practices in mobile software testing.
- Served as a Product Owner, applying the agile SCRUM methodology.
- Automated mobile tests using Blink, Ruby/Cucumber, and Python/Behave, following BDD and ATDD principles.
- Created and executed Rest API and performance tests using Postman and JMeter.
- Proficient in mobile testing frameworks like Appium and Calabash.

Test Analyst Aug 2013 - Oct 2015  
VTEX

Throughout this position, I successfully automated tests across diverse browsers, optimizing the efficiency and effectiveness of Acceptance and Regression testing. By utilizing C#, SpecFlow, Selenium, and various frameworks and techniques such as NUnit, SpecRun, Page Objects, and Parallel Tests, I contributed to delivering reliable and high-quality automated tests.

- Automated tests across multiple browsers, streamlining the process of Acceptance and Regression testing.
- Leveraged C# and SpecFlow for Behavior-Driven Development (BDD) implementation.
- Utilized Selenium for efficient browser interaction.
- Employed additional frameworks and techniques, including NUnit, SpecRun, Page Objects, and Parallel Tests.
