Short-term Health Care Training

This class is for any student interested in a short-term health training course and wants to gain a deeper understanding of the healthcare field.

This one week 20 hour course will increase student core competencies in communication, mathematics, medical terminology and soft skills to prepare students to enter into core healthcare classes. Information will be shared to provide students an understanding of health career pathways, health facilities and a variety of health occupations.

Students will gain a basic understanding of medical terminology, increase various soft skills needed to be successful within the healthcare field, acquire math skills, and develop a basic understanding of course requirements. Students who are interested in a health career will be strongly encouraged to attend this course before entering into an Iowa Valley Continuing Education Health course.

This course has been created to assist individuals in the health field or individuals that need a refresher to prepare for a health course offered at Iowa Valley.

* CNA, Pharmacy, Phlebotomy and EMT are all eligible for financial or other assistance for qualifying students through the GAP program. Make sure to ask what assistance may be available to you if you choose to take courses at IVCE.
