

# Flexibility and adaptability on all machine types

Fagor offers complete or partial retrofit options. You can customize the process to fit your specific needs.

In addition, **compatibility** with different brands and models facilitates integration. Whether it is a lathe, milling machine, grinding machine or 5-axis machine, Fagor offers **retrofit solutions for a wide variety** of industrial equipment.

# Continuous training for retrofitters and users

Fagor provides **training programs to ensure that operators and technicians are trained in the start-up and use of the new system.** This ensures a successful transition and optimal performance.

# Retrofit

Maximize efficiency with  
your machine with a new  
CNC system

# 01 Old machine

# 02 Partial retrofit

# 03 Total retrofit

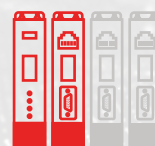

Retrofitting with Fagor allows you to upgrade your existing machinery without the complete investment in a new machine. **You will get a modernized and efficient system at a much more attractive cost.**

“Extend the life of your machine while making it easier to operate”

**Multiple possibilities** that will allow you to improve your machine:

Change only the CNC

Maintain some drives and renew others

Possibility of combining analog and digital control

Maintain some motors and renew others

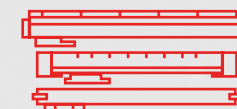

CNC Change

Drives

Motors

Feedback

A wide range of set up assistance services such as FineTune, Bode, Oscilloscope, Telediagnosis...
