* The electrical stroke occurs when the internal limit switches switch off the power to the motor. The installation then must allow the extension tube to coast at least 0.7 mm (0.028 in) beyond that position before it becomes mechanically blocked to travel any further (distance A1). If there is no mechanical block, the extension tube coasting distance will depend on the load. No load means the longest coasting distance while the distance becomes shorter as the load becomes higher. The exact coasting distance depends on the load, in which direction the load acts (push or pull), the mounting orientation of the actuator, and any added friction to the system by guides or other installations, and has to be determined on a case-by-case basis.

Electrak 1 S – Electrical Connections

Standard

Actuator supply voltage	[Vdc]	
S12		12
S24		24

* Black for 12 Vdc supply voltage

White for 24 Vdc supply voltage

** If equipped with AMP Superseal connector

Connect the yellow lead (pin 4 if connector) to positive and black or white (pin 5 if connector) to negative to extend the actuator. Change polarity to retract the actuator. The actuator should be protected from overload conditions by a customer-provided fuse in the circuit (6 A for 12 Vdc and 3 A for 24 Vdc).
