Outcomes4Me: Careers
Senior Mobile App Developer

At Outcomes4Me, we are building an integrated platform which provides patients and their families with new ways to engage with healthcare systems globally. Our goal is to help them seamlessly discover and access personalized treatment options and outcomes information.

We recognize that the efficacy of personalized health apps is a huge issue for a relatively new sector. Increasingly, design, tech and healthcare need to work together to prove that new products and techniques – driven by developments in mobile – can be effective. We are very much aware of these issues and are bringing together a diverse and multi-disciplinary team to address these challenges.

We are looking for a highly experienced app developer to join our team full-time to help us create lasting and meaningful mobile experiences on our digital health platform.

What you have:

- Extensive experience developing for mobile platforms
- Fluent with modern Javascript stack: React, React Native, Flow, TypeScript, GraphQL
- Experience with server-side development (particularly Node.js)
- Familiarity with Agile methodologies, such as Scrum / Kanban
- Comfortable owning the app development process from design to deployment, working closely with product designer and manager to deliver a successful, highly polished product
- Prior experience with either Objective-C or Swift is a plus
- Comfortable working at a startup pace and in a rapidly changing environment

What you will do:

- Develop and implement user-facing mobile experience and product features
- Work alongside design and product leads to define, prioritize and develop new product features
- Work with backend teams to integrate the app with purpose built APIs
- Own mobile app development and deliver polished working product

If you're interested in applying technology to make healthcare better and have relevant skills and experience, please send your resume to jobs@outcomes4me.com . We offer competitive compensation and benefit packages, and for the right skillsets are open to remote working configurations.
