

## Climate

### **Air Conditioning**

The air conditioning can be controlled using the thermostat on the first level and by using the white remote in the upstairs bedroom.

### **Bedroom Lighting and Ceiling Fan**

To operate the ceiling fan, the light switch adjacent to the light and fan remote (on the wall) needs to be “on”.

The illuminated switch at the top of the stairs is to control the light in the overhead space.

There is also a remote in a holder on the wall adjacent to the bathroom door.
