

Sleep Survey Opportunity for Totally Blind Individuals

You have been identified as a candidate for a sleep study survey. Non-24-hour sleep wake disorder occurs in some individuals who are totally blind and lack the light sensitivity necessary to reset the "body clock". This can lead to problems with sleep and/or daytime excessive sleepiness. You can help researchers understand non-24-hour sleep wake disorder by taking a brief phone survey. In addition, you will have the opportunity to be informed of future clinical studies that are recruiting in your area.

Survey Participants Need to:

- be at least 18 years of age
- be blind with no light perception
- have sleep problems and/ or daytime sleepiness

Collected information will be kept strictly confidential. For each completed survey, a donation of \$25 up to \$50,000 will be made to organizations that support people with blindness.

If you want to participate in the survey, please
call toll-free

1-877-708-1936

Monday-Friday between 9:00 AM and 5:00 PM ET.

Thank you!
