Commander guide rise of kingdoms

By Everything RoK / April 24, 2019 Have you ever wanted to play Rise of Kingdoms on your computer? Here's a quick guide on how to do it with BlueStacks. Read more By Everything RoK / January 31, 2019One of the biggest holes in the information about this game is how combat mechanics work. Unfortunately, descriptions of the commander's skills are often full of ambiguities. For a long time I read the description of the skill as accurately as possible, only to find out that it is not in line with reality. To put an end to this madness, I went ahead and thoroughly tested the main combat variables. I will try to provide a certain level of clarity as to what the main terms mean and describe some of their consequences. Read more By Everything RoK / December 23, 2018Seeing as commanders are perhaps the most important (and most controversial) aspect of this game, everyone wants to know who is the best. In the end, I tried my hand at the list of elusive commanders. While this is still a work in progress (when has i ever released something in its final form?), I think it is feasible in offering real insights. Read More By Everything RoK / December 12, 2018The best quiz of all Rise of Kingdoms. Complete it now to find out which pairs of commanders suit you. Or if you're already well in the game, check out how smart your commander choices were. Read morePage 2Download Rise of Kingdoms on PC/ MAC Have you ever wanted to play Rise of Kingdoms on your COMPUTER? There are many reasons why people prefer to play Rise of Kingdoms on their computer. Some people like the full experience on the bigger screen. Others do this for better control of their armies during battles. And others still prefer the higher performance of their pc compared to the phone. Personally, I like convenience when I'm already using a computer. For whatever reason, it is very easy to set up with emulators. My favorite is BlueStacks. With over 500,000 people already in Rise of Kingdoms on BlueStacks, you'll be in good company. Full disclosure: This is an affiliate link. If you download RoK through it, we will earn commission while keeping the download for free. Thank you in advance to those who help support this blog via the link. How to download BlueStacks1. Download and run the installer. Download bluestacks 4If you already have BlueStacks installed, click the link to open Rise of Kingdoms in BlueStacks.2. Sign in with Google IDYou do this only once after installing BlueStacks. If you don't already have a Google ID, you can create one for free very quickly.3. Install Rise of KingdomsIf you have gone through the link above, this site should be automatically open to you. Then just click install. If this is not the case, you can type it in the search bar.4. Open Uprising and enjoy! After you can click the icon on the My Apps tab and you're ready to go. You can create a new account or sign in to an existing account to continue. Download Rise of Kingdoms for PC/MACMy Experiences Using BlueStacksI must admit most of my experience using BlueStacks has been with other games. I've tried some other emulators, but BlueStacks has always given me the best results. As an iPhone user, Rise of Kingdoms thwarted my attempts to play bluestacks. But in my desperation to get back on BlueStacks I just made the transition to Android. So I will be able to show all my favorite uses soon. As far as rise of kingdom performance goes, I've heard mixed reports about many emulators. This seems to be a common problem with in-game chat. When you open it, it will smash the game. BlueStacks seems to have fixed this bug for the most part in one of their recent updates. However, if you are similar to me and mainly use Discord, this is not a problem. SupportOne of the advantages of BlueStacks is their Discord server. It is run by bluestacks up, with a community of experienced BlueStacks users. If you have any questions or problems, this is a great place to start. Not only do they have an unofficial support channel, but they also have the ability to quickly track the support tickets you submit, so they are seen much faster. All you have to do is enter your ticket number to one of the mods. They also have their own Rise of Kingdoms channel in their Discord. Even more reasons to join. Even if you are not using BlueStacks. Alternatively, you can always leave a comment or send me a message if you have problems with BlueStacks. I'm always happy to help where I can. Now you should be equipped with everything you need to play Rise of Kingdoms on your computer. I'd love to hear your ideas for getting the most out of BlueStacks. Please share how you use BlueStacks in the comments. Full disclosure: This post contains affiliate links. If you download RoK through it, we will earn commission while keeping the download for free. Welcome to Talent Builds & Trees at Rise of Kingdoms. If you're starting a new game or recently installed a game on your mobile device. This guide is a very good place to start as you will learn how important it is to invest commanders' talent points in the right talents to help you win the game. There are currently a total of 45 commanders (elite, epic, and legendary commanders) in the game, where you can level up and invest in your talents. That's a lot of commanders and if you are going to level them up. However, I can assure you that your commanders with the right talent building, it will be a rewarding experience for you, knowing that they are becoming your most valuable asset and the most dangerous commanders on the battlefield. If you wish, you can visit each commander's guide for details. You can also scroll down to see the best talent builds/trees for each commander if you prefer to cut into the chase. Without further ado, let's get the ball rolling. Download Rise of Kingdoms on PC for free! Best Commanders Talent Builds & TreesDownload Rise of Kingdoms on PC for FREE! Ending Best Commander Talent Builds & TreesAnd are all governors! I hope you've found our comprehensive guide to the list of all the best talent commanders builds and trees! As always, if you want to learn more about any of these commanders, you can click on one of them to see the details in full, which includes a set of skills, talent builds, links, and even tips. Let us know if you have any questions about these commanders and trees in the comments section below. Look out for more news, guides and tips on Rise of Kingdoms in House of Kingdoms! Commanders are the heart of Rise of Kingdoms. There are many possible builds that players can choose when to their commanders. There are also many reviews that build is the best. This guide explains how to schedule a build and lists some common builds. Planning to build a Commander The first thing to consider is how long you expect to play or how much money you plan to spend on the game. Legendary commanders are the best, but also the hardest to upgrade. Then there are Epic, Elite and finally Advanced. Your starting commander will be an epic commander. Most F2P (free to play) players focus on epic and elite commanders. P2P (Pay to Play) players will follow the legendary commanders. Role selection Additionally, you will want to consider what role you will play in: PvE (vs Barbarians) PvE Rally lead (vs Barbarian forts, Passes, Holy Sites) PvP Rally lead (vs other player cities, Ark of Osiris structures and other alliance structures) PvP Defense (vs incoming attacks from other players) F2P players typically won't be leading large rallies later in the game, but they will do a lot of PvE (Player vs. Enemy) vs Barbarians and some of the Barbarians Forts. Usually you will want to focus on at least one of the above for your commander-in-chief and then have decent extra commanders. Specialization squads There are two ways to buff commanders of squad types – those that have skills and talents specialized to one type of detachment, and those that increase all types of squads equally. The advantage of specialization is that if you can get a full march of one type of detachment, the bonuses are much higher and you will be able to win more battles and march faster. There are several builds that focus on cavalry, which can get you the fastest walking speed in the game, along with good attack bonuses. The downside of specialization is that if you don't plan to spend money on speeding up troop training, it takes a long time to get a full march specifically of one type of detachment. Hence, P2P players usually specialize. F2P players often choose to generalize because they can train all types of troops at once, the best way to get a large army is to train them all. So your chief attack commander would strengthen all units the same way. You can still upgrade your cavalry-only commander to get runes, help build alliance buildings, or other non-combat missions where quick marches help. Finally, there is a small rock-paper-type buff scissors with 3 types of units. Cavalry has a 5% bonus against archers. Archers have a 5% bonus against infantry, and infantry has a 5% bonus against cavalry. These effects can be enhanced with troops-specific talent specialties. All 3 have a 5% bonus compared to the siege. This is a minor effect, but it can reverse the battle if everything else is equal. Happiness To some extent, build can fortunately getting starlight sculptures and commander sculptures. Eventually you will get them all, but you probably won't want to wait weeks or months to use on your favorite commander. Meaning Finally, for many players, the exact choice of squads is not so important. Commanders are not limited to the following suggested roles, but in general, sticking to what they do best is most effective because these talent trees will synergize with the commander's abilities. F2P Suggested Builds PvE (Player versus Environment) Will probably be your commander-in-chief at first. PvE will always be something you should do, as they are the main source of experience, drop rewards that are worth the action points, and events can have neutral goals to overcome as quests. Many choose commanders with increased experience gained through passive skills, combined with a peace talent tree, to hunt barbarians. Regardless of the experience gained is ak reducing the cost of the action point from the tree of peaceful talents and increased damage to the barbarians and neutral targets that the peacekeepers excel with their passive skills and peaceful special tree talents. Some equipment also deals damage to barbarians or gain experience, so try to give your peacekeepers this equipment to make it more effective. For barbarian forts and holy places, take a look to use your top 2 peacekeepers to lay your damage on the passive skills of the barbarians. Gathering Get gatherers (Centurion, Constance, Sárka, Gajus Marius, Joan of Arc, Matilda of Flanders, Cleopatra VII, Seondeok, Ishida Mitsunari) and upgrade all your talents and abilities. Prioritize commanders who collect a lower rarity as the primary gatherers, as it's easier for them to maximize the collection of talent specialties (level 37 is enough talent points to maximize the top of the tools in the collecting tree) earlier and require less experience to level the level. Use other gathering commanders as secondary commanders to earn an additional bonus for your collection speed. Some normal quality equipment on basic gatherers will also increase the collection speed. Na Town Hall 22, you will have access to 5 marches, so take a look to expand the 5 basic gatherers. The exception may be Joanna d'Arc, who also has very good fighting skills, and many players use her as a second commander, commander, even basic. You can fully upgrade all her skills and talents to collect, and in the end it won't matter if you use her as a second commander. If you want to use it as a base, don't place talent points in its collection tree. Most gatherers have resource-specific preferences where they collect a specific resource faster than others. Therefore, if the gatherer skill has a higher collection rate for a given resource, try to keep them collecting that type of resource. Others do not have specific preferences and should accumulate the resources that are most needed. PvP Offense If you're free-to-play, you probably won't carry out major attacks, just joining, so you might just take care of the speed of your march, or use debuffs to help other marchers do more damage. Therefore, priority cavalry to quickly move around the map, or commanders with a speciality of support / talent. For open-field attacks, you'll need to use a specialized unit commander or get one of the very rare legendary commanders, preferably with active skills with multiple targets, and the best equipment equipped with wrinkles with squad types in your march. Fight in alliance territory as much as possible to take advantage of alliance war technology bonuses. You can explore your target to know which pairings they use and how good their commanders are, especially if it is an enemy alliance structure or garrison before attack, though this will notify the enemy that it can become a target. To attack cities or hostile structures, Scipio Africanus is an easy choice at an early stage. Using a commander with conquest talent is the most effective. PvP Defense You will need to have a master and secondary commander assigned to the wall to lead your city garrison, and also if you become a captain defending an alliance structure or a sacred place from which you should leave your best equipment offline. All garrison/defense commanders are specialized and you can choose who you want to defend your city. Read skill descriptions carefully, as most garrison commanders' abilities do not apply to strongholds that are alliance structures, such as flags and strongholds. You can choose between your supreme power commander, but preferably any commander with garrison talent and well upgraded. Be wed to strengthen your allies as this will kill some of the troops you send to help defend. Quick Attack You'll probably want to make a specialized quick march to quickly join raids or collect runes. Some combinations: Lancelot and Dragon Lancer (Cavalry). Although they are not the best units in the final game, they are the easiest to upgrade and have their passive skills to directly increase march. High High Minamoto no Yoshitsune are also great fast cavalry commanders, but they are much harder to upgrade. Hermann and Tomoe Gozen (Archers). They are harder to upgrade compared to Lancelot and Dragon Lancer. El Cid has the best archer walking speed, but is difficult to improve. Alexander the Great has this bonus on the map and Harald Sigurdsson (Infantry). However, they are legendary commanders and are unlocked later, so it's best to use other commanders with minimal talent for all walking speeds. Some equipment also provides increased walking speed. Talent points can increase the speed of the march beyond the commander's abilities. P2P (Pay to Play) Template:Todo Much of the same applies to P2P players, so keep in mind all the other comments in this guide. If you buy packages with money, you will have access to Minamoto no Yoshitsune and Hannibal Barca, as well as many more resources and items. The key difference is that leading major attacks and defenses in the open field and on the Holy Sites, the highest level of Barbarian Forts, and mobilizing enemy alliance structures will play a central role. This is because you will have and/or be able to obtain resources (experience volumes, starlight sculptures, commander sculptures and equipment) to better, faster and faster develop commander levels, talents and abilities. You can also increase alliance technology faster with more donations and your own technology with more normal resources. This will give you a good experience of legendary 60 6-star commanders, greater raid ability in your castle, and better and more top-tier troops to use, which combined makes your marches and garrison abilities stronger than most. Technically speaking, all these efforts increase the stats of your troops led by your commanders. This prowess is likely to be needed by your alliance for the main tasks. Priority should be given to major offensive and peace marches, as there will be more targets for the rally at all stages. Work on one march and commander at a time, focusing on a unit-specific combination. The goal here is to be as strong as possible (and as you like). You may have a garrison commander paired, as having all these resources can make your city a looting target. Upgrade Commanders gain experience by fighting barbarians, holy site guards, other neutral units, and toms of experience. Higher Rarity Commanders require more experience to gain levels. Each star extends the maximum commander level by 10 levels up to level 60. Note – Sometimes you are not going to align your commanders as quickly as possible with See the skills section below. The talents of everyone has a talent tree with 3 specialties (as in the table above). Each time your commander gains a level, a talent point is available, and more talent points are available when promoting to Star Levels 5 and 6. Note – It is difficult/expensive to undo the wrong choice of talent as talent resets are expensive. If you don't know how to target a commander, don't spend talent points until you're there. Secondary Commander talent points do not affect march or battle. Skill skills are the most important upgrade for commanders, without them talents and stars make no difference. All commanders have one active skill that triggers when the Commander's Rage Meter reaches a maximum of 1,000 for most commanders. They can then have 3 or 4 additional passive skills. All commanders start with their active skills of one level 1. To enable more skills, their star level must be upgraded. When a skill becomes available, the skill can be upgraded with commander sculptures. However, for almost all major commanders, you will want to upgrade their first skill first to Level 5 before enabling other skills! Senior rarity commanders require more sculptures to improve their skills. To upgrade all 4 skills to level 5, (16 total skill upgrades) takes: Legendary: 690 Epic Sculptures: 440 Elite Sculptures: 340 Advanced Sculptures: 240 sculptures and multiple starlight sculptures to unlock all non-knowledge skills from upgrade to Star Level 4. When you upgrade, one of the available skills will be randomly selected for upgrade until they are all level 5. For epic and legendary commanders, this allows them to learn the final knowledge, increase their previous skills, or activate new expertise skills. Stars When you reach level 10, your commander can raise the star level. But wait until you've maxed out their basic active skills to level 5 unless you're sure what you're doing. Before you upgrade, decide whether you want to try to jump up to 3 stars (so the commander can get a second commander on marches) or not. In most cases, you do. To perform a 3-star trick: Apply 2 sculptures in starlight to get to 40 or 80% of the first star. If this is not critical, use one more to get to 60 or 80%. If it doesn't matter, apply one more to get to 80%, but hopefully not 100%. Then, if you can get it up to 80%, apply 6 stars at a time. This will take you up to 150% of the stars, and you will have a good chance that it will be crucial, you will get double experience and 3 star will open. If you're unlucky and miss it, you just have to wait for the commander to advance level 20. This trick doesn't work for 4 or later stars, as these required too much star experience. However, if you have enough good stars, you can upgrade directly to 4 stars. Optimal skill distribution for legendary commanders While each commander drastically improves this requires a significant amount of their hard-earned legendary sculptures. This table therefore provides an ideal skill distribution for each commander before it becomes useful. Ideal Skill Distribution Commanders 5/11/11 Charlemagne, Cao Cao, El Cid, Frederick I, Guan Yu, Lu Bu, Tomiris 5/5/11 Aethelhaed, Alexander the Great, Artemisia I, Charles Martel, Constantine I, Cyrus the Great, Julius Caesar, Leonidas I, Mehmed II, Minamoto no Yoshitsune, Mulan, Richard I, Yi Seong-Gye 5/5/1 Ramesses II, Saladin, Takeda Shingen, William I 5/5/5 Attila, Chandragupta Maurya, Edward of Woodstock, Genghis Khan, Hannibal Barca, Harald Sigurdsson, Nabuchoch Ded Nazzar II, Theodora, Wu Zetian, Yi Sun-sin, Zenobia 1/5/0/0 Cleopatra VII, Ishida Mitsunari, Seondeok Template:Shortcut Template:
