THE ROAD AHEAD IS CHALLENGING.
WE ARE THE SMART SOLUTION.

SmartSolution is the driving force behind Yokohama innovation – the core of our existence. It is our approach to ensure that we are the best partner for you, and it’s what sets us apart from other suppliers. Focusing on the things that our customers consider most important: Longevity, Efficiency, Availability and Dependability, we’ve turned your day-to-day challenges into our primary focus. Developing products and services to help your business run smoother and ultimately improve your bottom line. Yokohama, the Smart Solution.

LONGEVITY
A FULL LINE OF LONG-LASTING, FUEL-EFFICIENT PRODUCTS.

EFFICIENCY
MORE STAFF, IMPROVED LOGISTICS, 24/7 EMERGENCY SERVICE.

AVAILABILITY
NATIONWIDE DEALER NETWORK OFFERING MORE ACCESS POINTS THAN ANY OTHER SUPPLIER.

DEPENDABILITY
THE LOWEST COST OF OWNERSHIP IN THE INDUSTRY.
YES Program

Teaming up with Yokohama drives business to you 24-hours per day, every day of the year. Yokohama’s YES, national emergency roadside tire service is just one more way Yokohama supports its dealers in providing fast, efficient service any time of day.

Trust Our Certified Dealer Network

Not only can we be found where and when you need us, we also partner with professional dealers who understand the importance of efficient and dependable service. Every SmartSolution Certified Dealer in our network is put through a rigorous certification process to ensure the quality of service expected from Yokohama.
As a tire rotates under load, thousands and thousands of times, the forces on the casing steel and rubber compounds are incredibly stressful. This strain energy can take the life out of tires prematurely. Our exclusive technologies help combat this fatigue by reinforcing the casing to extend tire life, allowing for multiple retreads and reducing maintenance costs. Which means you’re getting more tire for your dollar.

THE YOKOHAMA DIFFERENCE
**ENVIRONMENTAL PERFORMANCE**

The BluEarth® brand is reserved for Yokohama’s most environmentally-friendly tires engineered with advanced technologies focused on fuel-efficiency and performance.

**SMARTER ENGINEERING FROM THE START**

Contrary to popular belief, better performance doesn’t always come at the expense of the environment. Thanks to an innovative manufacturing process, we’ve developed tires designed to reduce the things that matter most: pollution, fuel-consumption and, ultimately, your operating costs.

**STRAIN ENERGY MINIMIZATION TECHNOLOGY: EXTENDED CASING LIFE**

Consider the effects of rapidly bending a paper clip, this is an exaggerated view of what the steel belts of a tire’s casing face over the many miles of its life. Over time, the strain of heavy loads, heat, rough roads and everyday operation break down the steel, reducing casing life. Our STEM technology reinforces the casing to help it stand up to these strains allowing for multiple retreads, deeper tread depths and wider tread profiles.

**MC² CONSERVATION TO THE NTH DEGREE**

When the enemy is fuel consumption, the solution is our Maximized Conservation Concept (MC²) technology. Utilizing advanced technology that minimizes the effects of heat on the casing and tread, MC² tires lower rolling resistance by 10% to reduce your cost-per-mile.

**PROUD TO BE SMARTWAY® VERIFIED**

Yokohama offers a number of tires designed to meet SmartWay’s stringent low rolling resistance criteria.
The life of a tire is dependent on many elements, but perhaps most important is the strength and integrity of its casing. It’s the foundation of the tire, the base on which everything rests. At Yokohama, we take pride in our commitment to building casings that maximize original tread longevity, performance, and ensure retreadability.

Building the best casing in the industry is no simple feat. Using Finite Element Method, our engineers can accurately predict the natural growth that occurs during the first 30,000 miles of operation. With that information they’re able to design a product that adapts to the operational stresses and strains the tire will encounter in operation.

**Steel Belts**
Effectively increase the stiffness of the tread area, minimize distortion of the ground contact area, provide puncture resistance, and increase fuel-efficiency.

**Body Ply**
Allows the tire to maintain inflation pressure, successfully carry the load and resist shocks.

**Belt Edge Cushion**
Help prevent separation of the belt edges (and therefore the tread) caused by the scissoring effect of the belts.

**Bead Assembly**
Our unique bead assemblies are combinations of steel and nylon chafer (reinforcing cord layers) wrapped around the bead (a bundle of high-tensile steel wires) and the bead filler (apex rubber). These combinations reinforce the bead area to secure the inflated tire against the rim. In a tubeless tire, this fit must be tight enough that air does not leak from the tire during normal operation.

**Inner Liner**
Specially designed to minimize air seepage into adjacent areas of the tire. The quality of the inner liner is critical to prevent air from penetrating into the casing.
**TIRE DIMENSIONS**

- **Overall Width**: The exterior measurement of a tire’s width from the inner to the outer sidewall (including protective ribs and decorations) when properly mounted and inflated.

- **Section Width**: The measurement of a tire’s width from sidewall to sidewall (excluding protective ribs or decorations) when properly mounted and inflated, but with no load placed upon the tire.

- **Free Radius**: The distance from the wheel axle center line to the outer tread surface of the unloaded, properly inflated tire.

- **Rim Width**: The linear distance between the outer and inner rim flanges on which the tire bead sits.

- **Static Loaded Radius**: The distance from the wheel axle center line to the tread contact surface. Measured after the tire has been mounted on its measuring rim, inflated to the test pressure and placed under a prescribed load.

- **Deflection**: The measured difference between the tire’s free radius and loaded radius when mounted on the measuring rim, inflated to the test pressure and placed under a prescribed load.

- **Tread Width**: The distance from the outer edge to the inner edge of the tread.

- **Tread Radius**: The design curvature of the tread profile.

- **Section Height**: The measurement of the vertical distance between the tire’s bead seat and outer tread surface when properly mounted and inflated, but with no load placed on the tire.

- **Nominal Rim Diameter**: The linear distance between bead seats measured at the widest point. This measurement may be in inches or millimeters.

- **Overall Diameter**: The linear distance between the tire’s tread surfaces measured at the widest point. This measurement is taken with the tire mounted on the measuring rim and no load applied.

- **Groove Depth**: The amount of manufactured tread measured at a predetermined location.
All radial tires consist of a sidewall, tread, shoulder and bead areas with each individual component contributing to the integrity of the overall product. The technological advancements in our products, including unique combinations of rubber compounds and innovative construction methods, offer better handling, ride comfort, treadwear and fuel-economy than ever before.

**YOKOHAMA TIRE CONSTRUCTION**

- **Specially designed inner liner** helps maintain proper inflation and protects steel belts from oxidation by minimizing air seepage.
- **An ultra wide top steel belt** increases rigidity across the entire tread surface, enhancing durability and reducing casing damage.
- **Features like block-shaped stone ejectors** prevent stones from traveling to the bottom of the grooves, reducing damage to the casing by 25%.
- **Swell edge cushion** firmly bonds steel belts to reduce strain and provide longer casing life.
- **Contoured bead area** allows the tire to sit evenly against the rim for extremely uniform rolling. Provides long, even wear, reduced friction and a smoother ride.
- **Enhanced sidewall protector bars** help shield the casing from scrubbing and curbing.

**SUPERIOR CASING PROTECTION**

**DURABLE, PROTECTIVE SIDEWALL**
Fleets around the world have turned to ultra wide base tires to help lower operating expenses. From ease of maintenance to increased cargo capacity and decreased fuel-consumption, these products are built to improve the efficiency of your vehicle.

**Zero degree belt**, engineered specifically to provide even pressure across the contact patch, allows for even weight distribution and vastly increased treadlife.

An **advanced profile** is optimized to manage the strain that occurs during normal operation allowing better durability and less casing fatigue.

**Durable five-belt package** allows for better casing design, creating a flatter carcass line, which helps maintain original shape. This creates a shorter, more efficient footprint.

**Oversized hexagonal bead** and double nylon chafer allow for easier mounting and provide even pressure along the wheel’s circumference to reduce strain and increase the life of the tire.
TREAD DESIGN

It’s the pattern of the tread combined with specially formulated rubber compounds that gives each tire its specific performance characteristics. Recognized as a leader in tread design, we’re continually researching new and innovative ways to improve tire performance and fuel efficiency.
RIB-BLOCK TYPE
This pattern combines a block type tread in the center with a shoulder rib design and has the following advantages:
- Outstanding braking force and traction
- Good traction on snow or in muddy terrain

RIB TYPE
In the rib type pattern the tread and grooves follow the circumference of the tire and have the following advantages:
- Low rolling resistance
- Comfortable ride
- Good steering
- Relatively low noise generation

LUG TYPE
In this pattern, the grooves are cut across the tread to provide the following advantages:
- High braking force
- Excellent traction on unpaved surfaces

BLOCK TYPE
This tread pattern is composed of independent blocks and has the following advantages:
- Outstanding braking force and traction
- Good traction on snow or in muddy terrain
While the components of a tire determine its inherent performance characteristics, it is the correct application of the tire that guarantees a satisfied customer. Because of this, it is important to carefully consider all the factors that affect tire performance in an application: the size of the vehicle, its specific use, weather, road conditions and terrain.

**Conventional Tires**
The taller sidewall allows for more flexibility to resist sidewall damage. Their higher static load radius allows for a smoother ride, while their higher diameter measurement delivers decreased rolling resistance.

**Low-Profile Tire**
Engineered with shorter, more responsive sidewalls, our low-profile tires ensure more uniform ground pressure resulting in less tread distortion. The lower height and lighter weight allow you to maximize your payload.

**Wide Base Tires**
Yokohama has developed wide base tires for on-road as well as off-road applications. They are especially cost-effective in applications for heavy load-carrying vehicles.

**Ultra Wide Base Tires**
Utilizing a unique casing that optimizes the operating profile to reduce strain energy, our ultra wide base tires provide better fuel efficiency, longer treadlife and unsurpassed retreadability.
TIRE IDENTIFICATION

The following letters may be used as part of truck tire size designations to identify the type of service or rim for which the tire is designed.

LT Identifies a light truck tire for service on trucks, buses, trailers and multipurpose passenger vehicles for normal highway service and to be used on a five degree tapered bead seat or on a 15-degree bead seat rim.

TR Differentiates certain tires from passenger car, light truck and other vehicles which use similar designations but are designed to fit rims of different bead seat diameters.

ML Identifies mining and logging tires used in intermittent highway service.

MH Identifies tires for mobile homes.

NHS Designates tires “not for highway service.”

ST Indicates special tires for trailers in highway service.

HC Designates tires for heavy trucks having 15-degree tapered bead seat rims of 17.5” diameter designated “HC”. The HC suffix differentiates these tires from light truck tires with 17.5” bead diameter.

EXPLANATION OF TRUCK TIRE DESIGNATIONS

DOT TIRE IDENTIFICATION CODES

All new tires sold in the United States must have a DOT number cured into the lower sidewall of one side of the tire. This code has a standard format which has been designated by the federal government.

Some manufacturers place an additional code with a specific serial which identifies the specific tire model (a tire type code). This optional number is located on the sidewall opposite the DOT number.

Commercial treads also include codes which are used to detail retread information. This code is generally found on the lower sidewall near the original DOT code.
There are many factors that contribute to how your vehicle performs, but few have as direct an impact as its tires. It’s vital to have a good understanding of your tires’ capabilities, and more importantly, their limitations.

A tire’s weight and speed limits are indicated by the tire service description: a short code located on the sidewall. This short code, which consists of a two or three digit number along with a single letter, designates just how much weight your tires are capable of carrying safely (load index) and the maximum speed the tires are designed for (speed category).

</tr>
</tbody>
</table>

The maximum load a tire can carry at various cold inflation pressures.
**PROPER MATCHING AND SPACING OF DUALS**

Paired tires should be of the same size designation, construction, tread design and as close as possible to the same outside diameter. Mismatching duals forces the larger diameter tire to carry an overload, causing it to overdeflect and overheat. The smaller diameter tire, lacking proper road contact, wears faster and irregularly.

**MAXIMUM ALLOWABLE DIAMETER DIFFERENCES BETWEEN A TIRE AND ITS DUAL MATE AT EQUAL INFLATION PRESSURES:**

<table>
<thead>
<tr>
<th>Radial Tire Size</th>
<th>Radius (inches)</th>
<th>Diameter (inches)</th>
<th>Circumference (inches)</th>
<th>(+) Depth (*)*</th>
</tr>
</thead>
<tbody>
<tr>
<td>All</td>
<td>0-1/8”</td>
<td>0-1/4”</td>
<td>0-3/4”</td>
<td>4/32</td>
</tr>
</tbody>
</table>

*Note: Determine the actual difference in diameter by measuring the tires (with a steel tape) at least 24 hours after initial inflation. Matching should be done before installing tires on the vehicle.

*Applies only if tires are of the same tread.

**Tire Mixing**

Using the same tire size and construction that was specified as the original equipment for that vehicle will normally produce the best performance from the vehicle and the tires. However, there are times when mixing of different tire sizes and constructions on a vehicle is necessary. Some mixing of tires can be allowed, if certain rules are followed:

1. Never mix different tire sizes or construction types on the same axle.
2. Bias ply tires can be mounted on steer axles and radial tires on single axle drive positions of two axle vehicles. Reversing these positions may result in handling problems.
3. Either bias ply or radial tires can be mounted on the steer axles, if the vehicle has multiple drive axles.
4. All multiple drive axles should have the same size and construction tires.
5. Tires mounted on trailers may be bias or radial, as long as all tires on each individual axle are the same size and construction.
6. No mixing of tire sizes and constructions are allowed on four-wheel-drive type vehicles (4WD).

If there are any other questions about possible tire mixing combinations, the vehicle manufacturer should be consulted before actual changes are made.
DEMOUNTING FOR TUBELESS TRUCK AND BUS TIRES

For tire safety procedures, we recommend referencing OSHA standards, which can be found at the following: http://www.osha.gov
MOUNTING PROCEDURES

Use of Bead Lubricant
Preferred materials for use as bead lubricants are animal or plant-based and mixed with proper water ratios per manufacturers’ instructions. When dry, the lubricant should have no residual lubricity and should not flake from the surface upon which it is applied. To avoid damage to tires and rims, the following should be avoided: petroleum oils or grease, improper ratios of approved lubricants and water, silicone oils and emulsions, and solvent-based lubricants.

Use of Sealants
Yokohama does not recommend or endorse the use of additives installed in the interior chamber of its mounted tires. The use of flammable materials is prohibited. The Yokohama Standard Limited Warranty remains in effect with the use of these additives, providing the additive is not the cause of a tire condition submitted for a warranty claim. Damages attributed to the use of an additive will be denied warranty consideration.

MOUNTING DIRECTIONAL TIRES

When mounted properly, directional treads prevent block squirm, effectively reducing irregular wear and improving treadlife.

Direction of Rotation
When viewed from the top, the tread pattern should face in the following direction:

Directional treads should be mounted facing opposite directions to ensure their “direction of rotation” arrows are each pointed to the front of the vehicle. This arrow can be found on the sidewall.
RUN-OUT AND MATCH-MOUNTING

Yokohama places red and yellow marks on the sidewalls of some truck tires to enable the best possible match-mounting of the tire and wheel assembly. There are two methods to ensure they are mounted properly:

**Uniformity Method**
When performing uniformity match-mounting, the red mark on the tire, indicating the point of maximum radial run-out, should be aligned with the wheel assembly’s point of minimum radial run-out, which is generally indicated by a dimple somewhere on the wheel assembly (consult manufacturer for details).

**Weight Method**
When performing weight match-mounting, the yellow mark on the tire, indicating the point of lightest weight, should be aligned with the valve stem.

Note: Not all wheel assemblies indicate the point of minimum radial run-out.
No factor contributes to a negative operating experience more than vehicle vibration: it torments operators everywhere, degrades ride quality, shortens tire life and strains vehicle components. Fortunately, steps can be taken to avoid operating under these conditions.
1. Visually inspect tires, wheels/rims and vehicle components for irregular wear and damage. Replace or adjust as required.

2. Check to be certain that tires are inflated according to vehicle manufacturer recommendations and the vehicle suspension is working correctly and vehicle is not tilting. Either bias ply or radial tires can be mounted on the steer axles if the vehicle has multiple drive axles.

3. Check each tire to be certain it is mounted properly on the wheel/rim. The tire fitting line should be concentric with the rim flange. If the tire has a yellow or red mark on the tire, it should be oriented to the rim correctly. See “Run-Out and Match-Mounting” section on page 18.

4. Test drive vehicle on a smooth road surface and diagnose symptoms. A five to ten mile warm-up is recommended to remove any flat spotting. Steering wheel vibration diagnosis should begin with front axle, wheel and tire conditions. Floor or seat vibration diagnosis should begin with drive axle. Power train and brake conditions can be diagnosed by alternate brake application and placing the transmission into neutral during vibration.

5. Check each tire wheel/rim assembly balance and adjust as required. If unable to balance, completely deflate tire, unseat tire beads and rotate tire 180 degrees on the wheel/rim. Inflate, rebalance and reinstall on vehicle.

6. If vibration is not eliminated, measure tire and wheel/rim assembly for excessive lateral or radial run-out. Replace as required.

7. Rebalance tire and wheel/rim assembly and test drive vehicle.
By design, Yokohama’s radial tires are constructed with lower aspect ratios than ever before. This allows them to respond to lateral forces more effectively, meaning it takes less time to transmit the steering input from the wheel to tread. This improved steering response means better performance on the road, but requires special attention be paid to proper tire mounting, balancing and installation procedures to ensure that optimal ride quality is achieved. Vigilant attention to these details along with regular maintenance will maximize your vehicle’s performance and guarantee a smooth, comfortable ride—mile after mile.
VEHICLE VIBRATION IS THE ENEMY OF COMFORT

Often operators attribute vibration to a faulty tire when the cause might be with a wear issue or the mechanical condition of the vehicle itself.
LONGER TIRE WEAR. LOWER OPERATING COSTS.

Today’s commercial tires are better than ever, constructed to deliver longer original treadlife, designed with durable casings and built to withstand more retreads. Despite these on-going product improvements there are still things that you can do to get the most out of your tires.
One way to get the most out of your vehicle is to be certain your tires roll smoothly through an optimized footprint. Unfortunately the tiniest of imperfections in one of hundreds of mechanisms involved will make your vehicle operate less efficiently. Vigilant inspection, regular service and prudent operation are paramount to ensuring that your cost per mile stays as low as possible.

There are three primary factors that prevent optimum performance from being achieved with otherwise mechanically sound vehicles:

- Incorrect Air Pressure
- Improper Alignment
- Operational Inefficiencies
TIRE PRESSURE

In general, tires perform best when inflated to match vehicle and axle loads. Steer tires often require maximum inflation pressure to carry the steer axle load, while trailer tires should be set at pressure corresponding to actual tire loading. Included in this guide are the current load/inflation pressure tables for all Yokohama products, only. There are three recommended ways to correctly determine and set operational inflation pressures:

- Yokohama tire load/inflation charts
- Actual vehicle weight
- Yokohama Tire Inflation Pressure Calculator:
  http://www.yokohamatruck.com/commercial/tire-tools/inflation-pressure-calculator
Proper Air Pressure

How a tire wears depends on the forces that act upon the contact patch of that tire as it meets the road. Therefore, it is important to maintain proper inflation pressure. If a tire's load is equal on all ribs or elements, it tends to have a square footprint shape.

Overinflation

An overinflated tire tends to have a short shoulder rib contact area (shorter than the center rib). As the tire rotates, the footprint center maintains close contact, but the shoulder area does not. This causes scrubbing action and uneven wearing of the shoulder rib while placing more strain on the contact area.

Underinflation

An underinflated tire can’t maintain its shape and becomes flatter than intended while in contact with the road. This causes over-deflection, internal heat build-up, increased rolling resistance and reduced fuel economy. Underinflation flexing and heat build-up within the tire components deteriorate tires and reduce casing life and retreadability.

- 20% underinflation can reduce tire life 30%
- 30% underinflation can reduce tire life 40%
- 40% underinflation can reduce tire life 50%
YOKOHAMA TIRE INFLATION RECOMMENDATIONS

Recommendation for an 80,000-lb. GVW operation vehicle: 6x4 Tractor, 53-foot long box trailer

Recommended Cold Inflation Pressures - requires truck to be parked 3-4 hours

<table>
<thead>

</tbody>
</table>

Steer tires in the first three examples are set at maximum cold inflation. In all examples, the drive and trailer duals are set at 80 psi, plus 10 psi for compensation between airing.

Note: Never bleed excessive air from a “hot” tire.

Actual Vehicle Weight

1. Determine actual tire loads.

- Weigh several tractor/trailer vehicle combinations that best represent actual maximum load conditions for these vehicles while in operation.
- Determine average weights per axle of these weights and divide that value by the number of tires on that axle to determine actual tire loading.
2. Determine minimum cold inflation pressures for each tire per axle.

- Use the actual load per tire (per axle) to determine the cold inflation pressures for the tires by size, ply and type.
- The actual tire load should be compared to the tire load limits on the chart for the particular tire size and ply rating.
- The corresponding recommended cold inflation pressure is indicated for the load in the chart heading.
- If the actual tire loads are heavier than the ply rating of the applied tire, it may be necessary to install a tire with a higher ply rating.

3. Use the determined inflation pressures as minimum inflation values to set up the vehicle for improved handling.

- In all cases, the determined inflation pressures based on actual load conditions should be considered minimum pressures.
- Operational air pressures can be set higher, but under no circumstances should they be set lower.

**Air Pressure Calculator**

These recommendations, as outlined, should be adopted and used for all Yokohama truck/bus tires when the tires are new and first installed on the vehicle. Correcting inflation pressure after irregular wear has begun will not correct the wear pattern.

The pressures will only be effective in preventing wear if used from the point of the original mounting.

For specific recommendations, please refer to the Yokohama Tire Inflation Pressure Calculator at http://www.yokohamatruck.com/commercial/tire-tools/inflation-pressure-calculator

* Results are minimum recommended inflation pressures. Recommended PSI are for cold tires; never adjust inflation pressures for hot tires.

Tire load limits at various inflation pressures are based upon Tire and Rim Association (TRA) standards and tables, except where there is no specification established by the TRA. In these few cases, the tire design is based upon the European Tire and Rim Technical Organization (ETRTO) whose standards govern these tire designs. To obtain recommendations for tires run in non-standard applications, customers and dealers should contact the Yokohama Technical Service department.
Proper alignment is an important factor in lowering operational costs. Ideally, when a truck is traveling in a straight line, all of the axles are parallel—and perpendicular to the vehicle centerline—and all the tires are rolling in a straight line, too. Not only will tires on a properly aligned vehicle last longer, but some manufacturers suggest that there are significant improvements in fuel economy, component wear, and even driver fatigue.
It is universally known that alignment plays as critical a role in vehicle efficiency as does any other factor. Still, between 70 and 80 percent of commercial vehicles on the road today are misaligned! Maintaining proper alignment settings is an arduous task but it’s one that will reward your bottom line. Most alignment issues can be attributed to one of four factors:

- Improper Ackerman Angle
- Caster/Camber Settings
- Toe Settings
- Drive Axle Alignment
ACKERMAN ANGLE

Ackerman steering geometry is an arrangement of linkages in the steering of a vehicle and is designed to solve the problem of wheels on the inside and outside of a turn needing to trace out circles of a different radius. The intention of Ackerman geometry is to avoid the need for tires to slip sideways when following the path around a curve.

Incorrect Ackerman geometry generally scuffs the tires when driving through corners and might cause tire squeal during sharp turns. The Ackerman Angle should be checked as part of any routine wheel alignment on new vehicles, or when a vehicle’s wheelbase is modified or exhibits toe type wear despite a proper toe-in setting.
**Ackerman Principle:** The inside wheel turns in more sharply than the outside wheel.
Caster is the forward or rearward tilt of the steering’s pivot point line in reference to a vertical line. Caster is positive if the line is angled toward the vehicle’s rear, and negative if the tilt is forward. Typically, 2 to 5 degrees of positive caster is recommended to make the vehicle more stable at high speeds and improve handling.

Though generally associated with handling, the caster angle can also affect tire wear. Improper caster can cause shimmy, pulling and shoulder wear on the steer tires.
CAMBER

Camber angle is the measure in degrees of the difference between the wheel’s vertical alignment perpendicular to the surface. If a wheel is perfectly perpendicular to the surface, its camber would be 0 degrees. Camber is negative when the tops of the tires tilt inward (towards the vehicle) and positive when the tops of the tires tilt away.

On newer trucks, camber wear should not be a major issue. Most trucks leave the factory with zero to slightly positive camber. Excessive positive camber will result in excessive shoulder wear, while negative camber will wear the inner half of your tire.

Correcting camber settings requires a bending of the front axle (which voids most manufacturer warranties). If an alignment shop indicated that camber is out of spec, the vehicle’s front bearing should be checked.
TOE SETTINGS

The toe angle identifies the direction of the tires compared to the centerline of the vehicle. It is expressed in either degrees or fractions-of-an-inch, and an axle is said to have “positive toe-in” when the imaginary lines created by the tires intersect in front of the vehicle and “negative toe-out” if they diverge. When drive tires propel a vehicle with improper toe settings forward, there is an increase in rolling resistance that negatively impacts fuel-efficiency, ride comfort and ultimately shortens the life of your tires.

The vehicle’s toe is the most critical alignment setting relative to tire wear and toe misalignment is the most common alignment condition affecting commercial vehicles. If the toe setting is just 1/32-inch off of its appropriate setting, each tire on that axle will scrub almost 3-1/2 feet sideways every mile, significantly reducing tire life.
TOE-IN IS THE MOST BASIC FRONT-END SETTING.
Typically toe is set at 1/16" toe-in (+ 1/16”).
Measured and set in a static state, toe-in allows the wheels to run straight, when the vehicle is loaded rolling down the highway.

TOE-IN
The distance between the front of the tires is less than the distance between the rear of the tires.

TOE-OUT
The distance between the front of the tires is greater than the distance between the rear of the tires.
MISALIGNED DRIVE AXLES

Generally when you think about the benefits of a properly aligned vehicle, you think about lowering operating costs via longer tire life - but that’s only the beginning. Not only will proper alignment extend tire life, but it has also shown to improve fuel economy, component wear and even driver fatigue.

Vehicle alignment isn’t a matter of just aligning the steer axle. It means aligning the drive and trailing axles, too. In a perfect world, trucks would travel in perfectly straight lines from one location to another. If this were the case, as the truck went down the road the axles would remain parallel, perfectly perpendicular to the vehicle centerline and worries about tire life would be a thing of the past. Unfortunately driving forces, mechanical complications and other issues can cause axles to fall out of place, negatively impacting the wear of the tire, and making drive axle misalignment the second most common alignment-related issue for commercial vehicles.
STEER TIRE WEAR CAUSED BY MISALIGNED DRIVE AXLES

**RIGHT THRUST**
*Cause*: Occurs if the vehicle’s drive axles are pushing the truck to the right.

*Result*: Wear on the right steer tire will mimic toe-in wear while the left side will exhibit the feathering on the right shoulder associated with toe-out alignment.

**LEFT THRUST**
*Cause*: Occurs if the vehicle’s drive axles are pushing the truck to the left.

*Result*: Wear on the left steer tire will mimic toe-out wear while the right side will exhibit toe-in wear.

**RIGHT THRUST, TOE-IN**
*Cause*: There are also combinations of both toe and axle misalignment which will put stress on just one steer tire.

*Result*: Here, the toe-in setting combined with right thrust misalignment causes the left front to wear normally while the right front feel like toe-in.

**RIGHT THRUST, TOE-OUT**
*Cause*: On the other hand, toe-out combined with right thrust will cause the front right to wear normally but places stress on the left.

*Result*: Standard wear on the right side with wear resembling toe-out on the left side.
At Yokohama, we understand that each of our customers presents their own unique set of business challenges and needs products tailored specifically to address their needs. Our engineers are constantly pushing the envelope in an effort to deliver the perfect combinations of specialized compounding, innovative tread features and reliable casing construction. So whether you’re hauling through a mountain pass or traversing a debris ridden work site, you can feel confident that Yokohama offers a wide variety of high quality commercial products to fit each of your application specific needs.

101ZL Spec-2™
TRUCK STEEL RADIAL

APPLICATION
LONG-HAUL, ALL-POSITION/STEER

The 101ZL Spec-2 represents our next generation of long-haul steer tire. Built with an advanced tread compound and improved casing design to enable longer treadwear, maximum durability and more retreads.

FEATURES AND BENEFITS
An Advanced Casing Profile that supports a wider belt package and delivers a more uniform footprint.

Pliable High-Elongation Tread Compound helps withstand the wear and tear caused by the lateral forces unique to steer tire positions.

Contact Pressure Equalizer Sipes optimize rib contact pressure to combat uneven wear and improve wet handling and braking.

Stress Equalizer Ribs ensure even shoulder edge contact pressure to the road and reduce shoulder step down wear.

101ZL Spec-2 replaces: Michelin X Line Energy Z • Goodyear Endurance LHS • Bridgestone R283S Ecopia

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
RY617™
TRUCK STEEL RADIAL

APPLICATION
LONG-HAUL, ALL-POSITION/STEER

The RY617 has all the traditional Yokohama qualities that savvy buyers have come to rely upon, along with the latest features that deliver long, even wear, enhanced wet traction and durability.

FEATURES AND BENEFITS

Five-Rib Tread Designs equipped with 6,000 stress control sipes provide excellent water evacuation and uniform wear.

Variable Contour Groove Wall provides added rib stiffness that further combats uneven treadwear.

Stress Control Groove reduces contact pressure at the tread edge, providing increased resistance to shoulder step down wear and promoting long even wear, particularly at the shoulder area.

Stone Ejectors deep inside the tread grooves keep stones from embedding into the tire to minimize drill damage for increased tread durability and extended casing life.

RY617 replaces: Michelin X Multi Energy Z • Goodyear Marathon LHS • Bridgestone R283A Ecopia

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
**108R™**

**TRUCK STEEL RADIAL**

**APPLICATION**

**REGIONAL-HAUL, ALL-POSITION/STEER**

The regional all-position/steer tire tested and proven to be a top performer in its class.

**FEATURES AND BENEFITS**

Specially Designed Shoulder optimizes shape to reduce shoulder ripping and tearing in abrasive applications, effectively lowering your cost per mile.

Premium Casing, our most resilient ever, including a 16-ply rating offers increased load capacity so you can carry more freight on every trip.

Sidewall Abrasion Guard reduces damage to the sidewall caused by accidental curbing and scrubbing in urban applications.

Rock Shield Platforms keep stones and debris out of the grooves to protect the casing for longer service life.

104ZR™/104ZR Spec-2™
TRUCK STEEL RADIAL

APPLICATION
LONG- AND REGIONAL-HAUL, ALL-POSITION

A true workhorse designed to deliver longer treadwear, low rolling resistance and enhanced traction.

FEATURES AND BENEFITS

Deep Original Tread Depth offers an extremely long treadlife to reduce downtime.

Serpentine Groove Pattern is built specifically to reduce premature shoulder step-down and irregular wear, further preserving overall treadlife.

Block-Shaped Stone Ejectors prevent stones from traveling to the bottom of the grooves, reducing damage to the casing by 25% to ensure greater durability and retreadability.

Ultra-Wide Top Steel Belt increases rigidity across the entire tread surface for enhanced durability and to prevent casing damage.

104ZR Spec-2 315/80R22.5 is the ideal tire for coach and regional/long-haul tour bus applications.

*SmartWay Verified only applies to this size.

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
**RY023™**

**TRUCK STEEL RADIAL**

**APPLICATION**

**REGIONAL HIGHWAY, ALL-POSITION**

Premium performance and durable construction for the most demanding applications.

---

**FEATURES AND BENEFITS**

Sidewall Abrasion Guard reduces damage to the sidewall caused by curbing and other accidental scrubbing.

Five-Rib Tread Pattern with semi-rounded shoulders reduces the potential for shoulder ripping and tearing while enhancing lateral stability, water dispersion and traction.

Rock-Ejector Platforms keep stones and debris out of the grooves to help thwart irregular wear.

Hexagonal Bead Base allows for easier mounting and even pressure along the entire circumference of the wheel for smooth rolling as well as increased driver comfort.

MY507A™
TRUCK STEEL RADIAL

APPLICATION
WIDE-BASE, ON/OFF-HIGHWAY, ALL-POSITION

The MY507A is designed to provide outstanding durability and tire life for wide base and on- and off-highway applications.

FEATURES AND BENEFITS

High Strength Belt Construction enhances durability in off-highway applications.

Stone Rejection Blocks in tread grooves improve durability and retreadability.

STEM-2 Casing Profile promotes internal strain reduction and longer casing life.

Special Anti-Chip Tread Compound strengthens on- and off-highway durability.

Additional Steel Reinforcement in the bead area gives added protection against bead damage.

Funnel-Shaped Grooves provide improved traction in off-highway applications.

MY507A replaces: Michelin XZY 3 • Goodyear G296 MSA • Bridgestone M854

RY253™
TRUCK STEEL RADIAL

APPLICATION
ON-HIGHWAY, ALL-POSITION

The low-profile RY253 is a wide base, performer offering lower initial cost, greater payload potential, better fuel economy and easier maintenance.

FEATURES AND BENEFITS

Heat-Resistant Tread Compound minimizes heat generation.

Six-Rib Tread Design provides superior traction on wet roads, a smooth ride and even wear.

Wide, Rigid Shoulder Ribs help prevent sidewall cutting and scuffing.

Special Risers in the groove corners and Stone-Rejection Blocks reduce stone penetration for improved casing life.

Specially Reinforced Bead Construction increases bead area durability for high-load operations and retreadability.

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
MY507™
TRUCK STEEL RADIAL

APPLICATION
ON/OFF-HIGHWAY, ALL-POSITION

MY507’s sturdy, wide tread construction and thick undertread is tough enough for off-road applications while offering extended treadlife on-road.

FEATURES AND BENEFITS

Ideal for on/off-highway logging, cement and construction operations.

Four Rugged, Contra-Diagonal Ribs with aggressive Buttressed Shoulders give full directional and steering stability, traction and braking.

Wide Block Type Rib Pattern increases block rigidity, provides outstanding wear resistance and delivers excellent traction.

Funnel-Shaped Grooves prevent stone retention, protecting the belt package and extending casing integrity.

MY507 replaces: Michelin X Works Z, XZY 3 • Goodyear G751 MSA • Bridgestone M853

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
MY627W Spec-2™
TRUCK STEEL RADIAL

APPLICATION
WASTE/SANITATION, ALL-POSITION

With its extra-rugged casing, wide tread area and specially-engineered compound, the MY627W Spec-2 is one of the most dependable all-position tires available for residential waste/sanitation vehicles.

FEATURES AND BENEFITS

Staggered Tread Pattern resists uneven wear, promoting long tread life and provides excellent water evacuation, improving wet weather traction.

A Reinforced Bead uses a Double Nylon Chafer to efficiently dissipate heat from critical areas, providing unparalleled protection during severe stop-and-go operations.

Durable Inner Liner enhances air retention and retreadability by preventing air from migrating to the casing walls.

Sturdy Sidewall Armor protects against damage from curbing and prolongs the life of the casing for extended retreadability.

Wide Outside Rib and Extra-Wide Serpentine Grooves resist tears and increase durability, while significantly improving traction in wet or dry conditions.

MY627W Spec-2 replaces: Michelin XZUS 2 • Goodyear Endurance WHA, G289 WHA • Bridgestone M860A

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
709ZL™
TRUCK STEEL RADIAL

APPLICATION
LONG-HAUL, DRIVE

A premium drive tire that's as uncompromising as it is reliable. With its specialized compound and unique tread elements, the 709ZL delivers the optimum balance of fuel economy, treadwear and traction.

FEATURES AND BENEFITS

Zenvironment Compound evenly disperses molecular elements, resulting in a longer lasting tread and lower rolling resistance for better fuel economy.

26/32" Tread Depth minimizes tread block movement for stability on the road and maximum fuel efficiency.

Tie-Bar Connectors increase block rigidity and reduce heel-toe wear for greater stability.

Z-blocks create multiple biting edges, providing aggressive all-season traction without sacrificing treadwear.

709ZL replaces: Michelin X Line Energy D • Goodyear FM G505D LHD • Bridgestone M710 Ecopia

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
703ZL™
TRUCK STEEL RADIAL

APPLICATION
LONG-HAUL, DRIVE

703ZL was developed with a compound, tread design and casing construction that offer longer treadwear and the lowest rolling resistance in the category.

FEATURES AND BENEFITS
The Deepest Original Tread Depth of any line haul drive tire in the industry (32/32") for extremely long original treadwear.

Zenvironment Compound reduces heat build-up, improves treadwear and provides the lowest rolling resistance in its category.

Funnel-Shaped Grooves are wider at the top for enhanced traction and narrow at the base to prevent stone penetration for extended casing life.

703ZL replaces: Michelin XDA5+ • Goodyear Endurance LHD • Bridgestone M726 ELA

## FEATURES AND BENEFITS

Advanced Tread Compound reduces heat buildup, resulting in longer wear and maximized fuel-efficiency.

30/32" Original Tread Depth and a Closed Shoulder Rib are engineered to create a large, even footprint, producing long, even wear.

Stress Control Groove redistributes more load to the outside rib, greatly reducing the chance of shoulder step-down wear.

Contoured Bead Shape optimizes tire-to-rim alignment, for highly uniform rolling and reduced friction, resulting in long, even wear and a smooth ride.

Funnel-Shaped Groove reduces stone retention and increases block rigidity for enhanced traction and wear rate.

TY517™/TY517 MC²™

TRUCK STEEL RADIAL

APPLICATION
LONG- AND REGIONAL-HAUL, DRIVE

By combining the maximum drive axle power of our popular TY517 with our fuel-saving MC² technology, we’ve engineered a long-haul tire that really drives your profits.

FEATURES AND BENEFITS

28/32” Original Tread Depth delivers long wear and road-grabbing power for the long haul without any compromises in traction.

Extra-Wide Circumferential Grooves are self-cleaning and V-shaped for improved water dispersion, lateral stability and long, even wear.

Advanced Tread Compound Technology reduces heat, provides longer wear and reduces rolling resistance.

Tapered Center Groove promotes stone ejection and reduces tread-stone damage.

Solid Outer Shoulder block contributes to flat, even wear.

TY517/TY517 MC² replaces: Michelin XDA-E • Goodyear Marathon LHD • Bridgestone M760 Ecopia

TY527™
TRUCK STEEL RADIAL

APPLICATION
LONG- AND REGIONAL-HAUL, DRIVE

Built to meet the needs of today’s modern fleets, the TY527 is designed to maximize original tread life, durability, retreadability, and to reduce rolling resistance.

FEATURES AND BENEFITS

32/32” Original Tread Depth and Special Cap Compound ensure long wear without sacrificing durability.

Temperature Controlling Cap Compound fights heat generation.

Distinct Directional Tread promotes even wear and exceptional traction.

Stone Damage Prevention Grooves protect casing integrity to extend casing life.

TY527 replaces: Michelin XDA5+ • Goodyear Endurance LHD • Bridgestone M726 ELA

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
**TY303™**

**TRUCK STEEL RADIAL**

**APPLICATION**

ON-HIGHWAY, DRIVE

TY303 is a deep-treaded workhorse designed for on-highway operations.

---

### FEATURES AND BENEFITS

Tread Compound generates long, even wear.

Unique arrangement of Shoulder Lug Grooves promotes even treadwear.

Rib Block Tread Design is ultra-durable and provides lower rolling resistance as well as reliable traction in snow.

---

**TY303 replaces: Michelin XDE M/S • Goodyear G572A LHD FM, G647 RSS • Bridgestone M726, M729F**

TY287™
TRUCK STEEL RADIAL

APPLICATION
REGIONAL-HAUL, DRIVE

TY287 combines all-season performance with technology to maximize treadlife.

FEATURES AND BENEFITS
Wide Twin Straight Grooves provide exceptional water evacuation.

Open Shoulder Block Design and uniquely-shaped Center Block enable all-season performance.

Three Pitch Variation reduces road noise for a quiet, comfortable ride.

TY287 replaces: Michelin XDS-2 • Goodyear G622 RSD • Bridgestone M895

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
SY767™
TRUCK STEEL RADIAL

APPLICATION
ON-HIGHWAY, DRIVE

SY767 sports an all-season compound and optimized tread pattern to overcome inclement conditions and extend treadlife.

FEATURES AND BENEFITS
Multi-Season Rubber Compound provides superior grip and wear resistance.

Extensive Grooving and Siping maximize biting edges for enhanced traction while Closed Sipes increase traction without sacrificing block rigidity.

Deep Wide Grooves efficiently evacuate water to maximize contact with the road surface.

Extra-Wide Tread matched with 26/32” tread depth promotes great handling stability and long even wear.

SY767 replaces: Michelin XDS-2 • Goodyear G182 RSD • Bridgestone M799

LY053™
TRUCK STEEL RADIAL

APPLICATION
ON/OFF-HIGHWAY, DRIVE

LY053 is designed to deliver good tire mileage in applications that require outstanding traction and cutting/chipping resistance.

FEATURES AND BENEFITS

Aggressive Lug Design with large blocks at tread center provides excellent traction and braking on rough roads with mud or gravel. It also enhances the self-cleaning ability of the tread.

Wide Tread Footprint combined with a 31/32” tread depth ensures excellent tire mileage.

Thick Undertread helps dissipate heat and allows the casing to operate at cooler temperatures.

Steel-Cord Top Belt helps protect against penetration damage and rust while minimizing tread distortion and heat generation.

Special Compound resists fatigue, chipping and scaling in rugged off-road conditions.

LY053 replaces: Michelin XDY-EX2, X-Works XDY • Goodyear Workhorse MSD • Bridgestone L317

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
BluEarth 709L™ UWB
TRUCK STEEL RADIAL

APPLICATION
LONG- AND REGIONAL-HAUL, DRIVE

Our most fuel-efficient drive tire ever, and our first commercial tire to earn the prestigious BluEarth badge.

FEATURES AND BENEFITS
Advanced Compounding and Unique Tread Design are resistant to heat buildup for improved wear-resistance and fuel-efficiency.

Zero-Degree Belt is the key component to our highly durable casing, creating a consistently stable footprint for long, even wear.

Z-block Design creates countless biting edges that provide outstanding grip during acceleration, and unique tie-bar connectors increase block rigidity to reduce heel-toe wear.

Seven Circumferential Grooves efficiently evacuate water from beneath the tread to maximize contact with the road.

BluEarth 709L UWB replaces: Michelin X One Line Energy D • Goodyear Fuel Max SSD • Bridgestone Greatec M835A Ecopia

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
902L™ UWB
TRUCK STEEL RADIAL

APPLICATION
LONG- AND REGIONAL-HAUL, DRIVE

The 902L UWB offers operators outstanding all-season traction, long original treadlife, low rolling resistance and a casing made to handle more retreads than the competition.

FEATURES AND BENEFITS

27/32” Tread Depth delivers maximum traction and extra-long treadlife.

Zero Degree Belt provides even weight distribution for a stable footprint and increased treadlife.

Small Block And Sipe Combo is engineered to reduce wear and improve fuel-efficiency.

Advanced Rubber Compound reduces heat generation to optimize fuel economy.

Casing is created specifically to reduce tire strain, prevent casing growth and maximize retreadability.

Dual Sipes improve acceleration and braking on ice.

902L UWB replaces: Michelin X One Line Grip D • Goodyear G392 A SSD FM

BluEarth 109L™  
TRUCK STEEL RADIAL

APPLICATION  
LONG-HAUL, TRAILER

The BluEarth 109L is a super fuel-efficient trailer tire engineered to withstand the rigors of close quarters maneuvers.

FEATURES AND BENEFITS

Advanced Stress Control Groove resists shoulder damage from sharp turns or accidental curbing.

Optimized Tread Pattern resists scaling in lateral slides common in tight maneuvers.

State-of-the-Art Compound resists wear and provides one of the lowest RRC’s in the category.

Compact Tread Blocks roll smoothly for greater fuel-efficiency, while the five-rib design assures superior traction.

BluEarth 109L replaces: Michelin X Line Energy T • Goodyear FM LHT • Bridgestone R197 Ecopia

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
RY587™
TRUCK STEEL RADIAL

APPLICATION
LONG- AND REGIONAL-HAUL, TRAILER

With a unique combination of long, even original tread mileage, lower fuel consumption, outstanding durability and trouble-free operation, the RY587 is the perfect choice for today’s long-haul trucking fleets.

FEATURES AND BENEFITS

Stress Control Grooves minimize pressure at the edge of the tread, resulting in a dramatic reduction of free-rolling wear.

Advanced Tread Compound Technology provides longer wear and reduces rolling resistance, resulting in lower fuel consumption.

Stone Ejector Ribs prevent stones from reaching the bottom of the groove to prevent premature casing damage.

Belt Edge Cushion and Edge Cover Sheet allow steel belt edge flexibility by bonding tightly for reduced strain and longer casing life.

Distinctive Five-Rib Tread Design allows for effective water evacuation.

RY103™
TRUCK STEEL RADIAL

APPLICATION
ON-HIGHWAY/IN-CITY, LOW-PROFILE, ALL-POSITION

The versatile and reliable RY103 incorporates low-profile engineering with quality construction for better mileage, more payload potential, improved handling and better stability.

FEATURES AND BENEFITS

Straight Five-Rib Tread Design with four grooves inhibits stone retention, promotes even wear and provides a smooth ride, improved handling and superior wet traction.

Wide Shoulder Ribs reduce shoulder step wear.

BluEarth 109L™ UWB
TRUCK STEEL RADIAL

APPLICATION
LONG- AND LINE-HAUL, TRAILER

A trailer tire so efficient, it earns both the BluEarth brand and SmartWaySM verification, the BluEarth 109L UWB performs where it matters most: your bottom line.

FEATURES AND BENEFITS
Fuel-Efficient Tread Compound provides one of the lowest RRC’s in the category without sacrificing treadwear.

Optimized Tread Pattern with Seven Circumferential Grooves rolls smoothly for improved fuel-efficiency.

Zero-Degree Belt assures a consistently stable footprint for long, even wear.

Tapered Grooves promotes stone ejection.

Optimized Sipes greatly improve traction, for powerful braking in acclimate conditions.

BluEarth 109L UWB replaces: Michelin X One Line Energy T • Goodyear FM SST • Bridgestone R197 Ecopia

APPLICATION
LONG- AND LINE-HAUL, TRAILER

RY407™ UWB
TRUCK STEEL RADIAL

APPLICATION
LONG- AND REGIONAL-HAUL, TRAILER

The long-lasting, fuel-efficient RY407 UWB is designed to reduce vehicle weight and make your business more efficient.

FEATURES AND BENEFITS

Zero Degree Belt ensures even pressure across the contact patch, allowing for even weight distribution and vastly increased treadlife.

Oversized Hexagonal Bead and Double Nylon Chafer allow for easier mounting and provide even pressure along the wheel’s circumference to increase tire life.

Advanced Rubber Compound minimizes heat buildup in the tread area to reduce rolling resistance and allow for deeper tread depths.

Seven Circumferential Grooves and Cross Sipes provide excellent water evacuation and help resist irregular wear.

TY213A™
LIGHT TRUCK COMMERCIAL

APPLICATION
ON-HIGHWAY/IN-CITY, ALL-POSITION
The TY213A is designed for outstanding stability, reliable water drainage and lasting treadlife for highway and urban applications.

FEATURES AND BENEFITS
Five-Rib Tread Design offers improved handling and excellent all-weather traction.

Combination construction featuring a Polyester Casing and ultra-tough Steel Belts provides outstanding durability.

Load Range E Load Capacity handles heavy duty applications.

RY215™
LIGHT TRUCK COMMERCIAL

APPLICATION
ON-HIGHWAY, ALL-POSITION

Designed for better handling, the RY215 is engineered to slice through standing water to provide outstanding wet-road performance.

FEATURES AND BENEFITS
Tapered, Multi-Kerf Shoulders prolong tread life and improve steering stability.

Wide Grooves and Deep Kerfs disperse water more efficiently for wet-weather handling.

High Turn-Up Construction and Bead Filler reduce beadline cracking and improve responsiveness.

Polyester Carcass with Steel Belts increases durability.

TY303A™/TY303LT™
LIGHT TRUCK COMMERCIAL

APPLICATION
HIGHWAY ALL-STEEL RADIAL TRACTION

Drive-axle radial for on-highway operations for 2-axle tractors. Available in low-profile sizes.

FEATURES AND BENEFITS
Special Tread Compound generates fuel efficiency and long tread life.

Advanced Arrangement of Shoulder Lug Grooves promote flat, even treadwear.

Rib-Block Tread Design combined with a deep tread depth provide low rolling resistance, outstanding traction on snow and muddy terrains and excellent durability.

OE Fitment on: Hino 155 (Canada) 2015 -

Y735B™
LIGHT TRUCK COMMERCIAL
APPLICATION
ON-HIGHWAY, ALL-POSITION

The Y735B is designed to provide outstanding handling and traction for heavy-duty light truck applications.

FEATURES AND BENEFITS
Outside Tread Blocks provide extra traction on snow and mud-covered roads.

Center Tread Blocks are specially arranged to promote improved stability and handling.

Constant Contact Center Blocks reduce tread noise.

Load Range E Construction provides extra load-carrying capacity.

OE Fitment on: Mitsubishi Fuso FG ‘06

For warranty information, please refer to the Yokohama Tire Warranty Claims Procedure Manual at http://www.yokohamatruck.com/warranty
TY025™
LIGHT TRUCK COMMERCIAL
APPLICATION
ON-HIGHWAY, ALL-POSITION

The TY025 is a sure-footed traction tire for the roughest highway conditions.

FEATURES AND BENEFITS
Uniform Profile maintains balanced dispersion of stress for easy-rolling, longer life and enhanced fuel economy.

Two-Ply Steel Belts deliver long mileage and handling stability.

All-Steel Construction improves original tread durability and guards against punctures.
