

Backup to Object Storage (B2OS)

Automatic Snapshot-based backup to Object Storage

Set it and Forget it

Automatic, snapshot-based incremental, backups

Object Target

Backup to cost-effective object-based storage such as Amazon S3

Create new Storage Tiers

Use B2OS as a Tier 2 and Glacier as Tier 3

Complete Flexibility

Restore data from B2OS to any vendor – Zadara, Amazon, or other

Backup to Object Storage (B2OS) provides a new, simple, cost-effective level of data protection leveraging object-based storage

The Zadara® enterprise-class VPSA® Storage Array offers the performance, control, privacy, and management features customers have come to expect from traditional enterprise storage solutions, but with the added advantages of elasticity and the economics of an as-a-service model. The solutions are available both in the cloud, as well as in an On-Premise as-a-Service (OPaaS) option.

VPSAs deliver iSCSI block (SAN) and NFS/CIFS file (NAS) storage so that business applications not only can run in Cloud environments, but do so with optimum reliability, data privacy, serviceability, and performance. This sets the Zadara solution apart from other cloud storage alternatives, which require the use of non-standard interfaces or object-based storage architectures. VPSAs are feature rich, enterprise-class, and isolated for privacy and consistency.

Zadara's Backup to Object Storage (B2OS) feature enables VPSA customers to create an automatic, snapshot-based, continuous, incremental backup to low-cost, object storage. The B2OS feature eliminates the need for host-based backup software and provides a simple, easy-to-use, high-performance, block-based, backup process.

VPSA customers can also migrate data from Amazon S3 to Amazon's Glacier cold storage, creating new tiers of data protection (e.g., Tier 0 – VPSA 800GB SSD, Tier 1 – VPSA 6TB HDD, Tier 2 – VPSA B2OS, Tier 3 – Glacier).

Finally, maintaining Zadara's mission of providing customers with complete flexibility, data backed up by B2OS can be restored to any storage medium from any vendor including Zadara VPSA, Amazon S3/EBS/EFS/Glacier or any other storage target required by the user.
