

Bull Planetary Mixers Models 100 - 160

Description

The legendary power of the bull is reflected in the BULL planetary mixers line, together with a sleek and captivating design.

The technical solutions, such as the oil-bathed gear transmission boxes, the structural rigidity of the body, and the installed power, allow the machines to be used under even the most demanding conditions. The simplicity in construction guarantees quick and simple maintenance.

The use of an electronic inverter protects the motor from possible overloads and enables the operator to find the ideal mixing speed for any product. Easy to clean thanks to the removable grid and easy to use with the interchangeable tools, with or without removing the bowl. The frame is made of thick painted steel, and parts making contact with the food are stainless steel or compatible materials. For artisan – industrial production.

Bull mixers designed for heavy duty applications, always the right mixing speed with the variable speed drive system (also while mixing), that reduces splash out.

Bowl and tools in stainless steel.

Enamelled steel structure (on request, stainless steel is also possible).

Safety cover devices.

Electrical Bowl lifting.

Control panel with speed variator.

Bull Mixer 100-160 Specifications

Features		Bull 100	Bull 160
