

Food warmers and holding stations are optional accessories that can be used with Frymaster spreader cabinets and fryers to maintain optimal temperature of prepared food. Food Warmers are available separately to fit existing Frymaster spreader cabinets.

The rectangular food warmer produces an 457mm heat pattern over the entire length of the unit to keep cooked food at optimal temperature with radiant heat to assure peak flavor without cooking or drying. The shell is manufactured with durable aluminum alloys and is easy to clean. "ON/OFF" toggle switch, and a 1.8 M cordset are mounted in the shell. Mounting brackets and hardware are provided for installation.

These units can be used with either the cafeteria-style pan with mesh screen or with the perforated, curved scoop pan for quick, easy serving.

* Frymaster food warmers and holding stations are not free standing. -- must order with a Frymaster spreader cabinet.
