

The secret is the ceramic heat bed and patented vortex gas/air mixture that combine to create a whole new era in grilled food, and no thermo-couples required. No fat means no fat tray. More even concentrated heat atomises fat and moisture molecules that are returned to the food. Taste improves, shrinkage is minimised.

A range of models and accessories are available and all models come with the Synergy Lifting and Scraper Tools.

### SG900

**Dual Burner** Synergy Grill

**Energy Consumption:**

Natural Gas: 41mJ
