## Water Supply

USING A WATER SUPPLY THAT DOES NOT MEET UNOX'S MINIMUM WATER QUALITY STANDARDS WILL VOID ANY WARRANTY.

It is the responsibility of the purchaser to ensure that the incoming water supply is compliant with the listed specifications through adequate treatment measures.

Drinking water inlet: 3/4" NPT\*, line pressure:  
**Line pressure:** 22 to 87 psi; 1.5 to 6 Bar (29 psi; 2 Bar recommended)

### Inflow water specifications

|                         |              |
|-------------------------|--------------|
| Free chlorine           | ≤ 0.5 ppm    |
| Chloramine              | ≤ 0.1 ppm    |
| pH                      | 7 - 8.5      |
| Electrical conductivity | ≤ 1000 µS/cm |
| Total hardness          | ≤ 30° dH     |
| Chlorides               | ≤ 120 ppm    |

### Steam circuit: inflow water specifications

|                |          |
|----------------|----------|
| Total hardness | ≤ 8 °dH  |
| Chlorides      | ≤ 25 ppm |

To avoid the formation of limescale the incoming water must have total hardness ≤ 8°dH.

\*This value refers to daily steam cooking of 1-2 hours. In any case, if with a total hardness ≤ 8°dH there is still production of limescale, it is mandatory to treat the water in order to avoid limescale production. Unox recommends water treatment systems based on ion exchange resins. Water treatment systems based on polyphosphate are not allowed.

## Installation requirements

Installations must comply with all local electrical systems, particularly as for minimum wire gauge required for field connection, hydraulic and ventilation supply. Exhaust and fume analysis must be performed in case of gas ovens.
