# 1. Applications

## Introduction

NBG and NKG are multipurpose pumps suitable for a variety of different applications demanding reliable and cost-efficient supply.

NBG and NKG pumps are used in five main fields of application:

- water supply
- industrial pressure boosting
- industrial liquid transfer
- HVAC
- irrigation.

## Water supply

Besides general water supply in municipal and industrial waterworks, the NBG and NKG pumps are used for these specific applications:

- filtration and transfer at waterworks
- pressure boosting in mains
- pressure boosting in high-rise buildings, hotels, etc.
- pressure boosting in industrial buildings
- various swimming bath applications.

## Industrial pressure boosting

Pressure boosting in these applications:

- industrial washing and cleaning systems
- industrial wash-down systems
- vehicle washing tunnels
- firefighting systems.

## Industrial liquid transfer

Liquid transfer in these applications:

- cooling and air-conditioning systems, refrigerants
- boiler-feed and condensate systems
- aquafarming
- industrial heating systems
- district heating plants.

TM030146

TM030147

TM030148

## HVAC

Liquid transfer in these applications:

- heating systems
- ventilation systems
- air-conditioning systems.

## Irrigation

Irrigation covers these applications:

- field irrigation, flooding
- sprinkler irrigation
- drip-feed irrigation.

TMC030149

## 2. Features and benefits

NBG and NKG pumps offer the following features and benefits:

- The pumps are non-self-priming, single-stage, centrifugal volute pumps with axial inlet port, radial outlet port and horizontal shaft.
- All pumps are according to ISO 5199.
- Inlet and outlet flanges are according to EN 1092-2.
- Dimensions and rated performance are according to ISO 2858 (16 bar).  
However, the stainless steel product range is designed for PN 25.
- The mechanical shaft seal has dimensions according to EN 12756.
- The pumps offer flow rates from 2 to 2200 m<sup>3</sup>/h and heads from 2 to 250 m.
- The pumps can be delivered as -E versions where they are combined with an MGE motor (with integrated frequency converter) or they are combined with a "back mounted" CUE frequency converter in combination with a standard motor. Both versions of the -E products are delivered as complete units with no wiring needed to a control room.
- All pumps are statically balanced according to ISO 1940-1 class 6.3.  
Impellers are hydraulically balanced.

GRA2519

*NBG pump*

- For NBG pumps the back pull-out design enables removal of the motor, motor stool and impeller without disturbing the pump housing or pipes. Even the largest pumps can thus be serviced by a single person with a crane.

TM029512

*NBG back pull-out design*

- The NBG pump is close-coupled with a totally enclosed fan-cooled standard motor with main dimensions to IEC and DIN standards.

- For most of the NBG pumps, a Grundfos-designed base frame is available. For more information, see section NBG base frames.

GRA2514

*NK pump*

- For NKG pumps the back pull-out design enables removal of the motor, motor stool and impeller without disturbing the pump housing or pipes. Even the largest pumps can thus be serviced by a single person with a crane.

TM031004

*NKG back pull-out design*

- The NKG pump is long-coupled with a totally enclosed fan-cooled standard motor with main dimensions to IEC and DIN standards and mounting designation B3 (IM 1001).

### Related information

[NKG base frames](#)

## Pumps with standard motors

# IE3 IE4 IE5

NBG and NKG pumps are fitted with standard motors with efficiency classes IE3/IE4/IE5 for low-voltage three-phase motors.

## Pumps with electronic speed control

# IE5

NBGE and NKGE pumps are NBG and NKG pumps equipped with a motor with built-in frequency converter and the necessary application software to achieve an all-in-one solution enabling electronic speed control.

Electronic speed control enables continuously variable control of motor speed which again enables adaptation of the performance to a given requirement.

If a sensor is installed, NBGE and NKGE pumps allow for any of these configurations and control methods:

- constant pressure
- proportional control
- temperature control
- constant flow.

NBGE, NKGE pumps with 2-pole motors up to 22 kW and 4-pole motors up to 22 kW are fitted with Grundfos permanent-magnet MGE motors.

## Why select an E-pump

A pump with electronic speed control offers these benefits:

- energy savings
- increased comfort
- control and monitoring of pump performance
- communication with the pump.

For further information on electronic speed control, see section Speed-controlled pumps.

## Energy-optimised pumps

NBG, NKG pumps are energy-optimised and comply with the EuP Directive, Commission Regulation (EC) No 547/2012, in which most pumps are classified or graduated in an energy efficiency index (MEI). See also section Minimum efficiency index.

### Related information

## ATEX-approved pumps

On request, Grundfos offers NBG and NKG pumps with ATEX-approval in accordance with Directive 94/9/EC, group II, category 2G/D and 3G/D. For more information on ATEX-approved pumps, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858".

## 4. Product range

The tables on the following pages show the complete product ranges of NBG, NBGE and NKG, NKGE pumps. The standard range has been combined on the basis of the following parameters:

### Pump

- Pump housings have outlet flanges from DN 32 to DN 300.
- Some stainless steel pump sizes have loose flanges. All others have fixed flanges.
- NBG pumps are available in mounting design A, B, C and F. The base frame for C is available as accessory. F has base frame. For further information, see section Mechanical construction.
- Support blocks: NB, NBG pumps combine with many motor frame sizes. In some cases, support blocks or support rails are needed in order to level out the height difference between pump and motor. Also the size of the motor flange may necessitate the use of supports. See section Support blocks. The Grundfos Product Configuration System makes it possible to configure the NB, NBG pump and the supports, if needed.

### Motor

- Motors are for 50 Hz.
- NBG and NKG pumps are available with 2, 4, 6 and 8 pole motors in IE3 and IE4 efficiency version.
- NBGE and NKGE pump are available with
  - Medium speed (4000 RPM) motors in IE5 version up to 22 kW
  - Low speed (2200/2000 RPM) motors in IE5 version up to 22 kW
- Motors with power rating up to and including 4 kW are available for "low voltage"; motors as from 2.2 kW are available for "high voltage".
- Some pumps can be delivered as -E products in combination with back mounted CUE + IE4/IE5 motor.
- All pumps with non-E-motor can be connected to an external frequency converter (CUE or other brand).

### Custom-built pumps

See the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858", or contact Grundfos.

<sup>3)</sup> For information about mounting designs, see section Mounting design.

<sup>4)</sup> F: fixed flange. L: loose flange.

<sup>5)</sup> Heavy duty bearing design is required due to the pump design.

Go to section "Selection of pump bearing design" in the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN733 and ISO 2858" to evaluate the service life of the bearing system.

## 5. Identification

### Nameplate, NBG, NKG

TM084300

Example of NBG nameplate

Pos.	Description
1	Type designation
2	Identification code
	92656450 Product number
	00000001 Serial number
	P2 Production site code
	2015 Production year and week (YYWW)
	R1 Range identification (service range code)
3	Nominal flow rate
4	Nominal pump head
5	Pressure rating and maximum temperature
6	Hydraulic efficiency at best efficiency point
7	Minimum efficiency index
8	Frequency
9	Actual impeller diameter
10	WRAS approval or Pump Energy Index (PEI) PEI <sub>CL</sub> : constant load PEI <sub>VL</sub> : variable load
11	Country of origin
12	Rated pump speed

TM083489

Example of NKG nameplate

Pos.	Description
1	Type designation
2	Identification code
	99431975 Product number
	10000001 Serial number
	P3 Production site code
	2132 Production year and week (YYWW)
	R1 Range identification (service range code)
3	Nominal flow rate
4	Nominal pump head
5	Pressure rating and maximum temperature
6	Hydraulic efficiency at best efficiency point
7	Minimum efficiency index
8	Frequency
9	Actual impeller diameter
10	Pump Energy Index (PEI) PEI <sub>CL</sub> : constant load PEI <sub>VL</sub> : variable load
11	Country of origin
12	Rated pump speed
13	WRAS approval

## Type key, NBG, NBGE

**Example 1: NBG 100-65-200/219VAAEF2KESBQKEKX4**

**Example 1: NBG**

**100-65-200/219VAAEF2KESBQQEKX4** shows an NBG 100-65-200 pump with these characteristics:

- Super Vortex impeller
- hydraulic version A
- basic version
- with ATEX approval, certificate or report
- DIN flange to EN 1092-2 pipe connection
- 16 bar flange pressure rating
- stainless steel pump housing, EN 1.4408
- stainless steel impeller, EN 1.4408
- stainless steel wear ring, EN 1.4517
- stainless steel shaft, EN 1.4401
- EPDM O-rings for pump cover
- single shaft seal arrangement
- BQQE shaft seal
- 4 kW (3.7 hp) motor, US DOE regulated motor, 4-pole, 60 Hz.

**Example 2: NBGE**

**200-150-315.2/317ACAIEF3KFSDAQFYW1** shows an NBGE 200-150-315.2 pump with these characteristics:

- 317 mm closed impeller, cylindrical trim
- hydraulic version A
- without built-in sensor, one cable and one pressure sensor are supplied with the pump.
- pump with ATEX approval
- DIN flange to EN 1092-2 pipe connection
- 25 bar flange pressure rating
- stainless steel pump housing, EN 1.4408
- stainless steel impeller, EN 1.4408
- stainless steel wear ring, EN 1.4517
- stainless steel shaft, EN 1.4401
- FXM O-rings for pump cover
- single shaft seal arrangement
- DAQF shaft seal
- motor size outside DOE scope, not for sale in North America, 2-pole, 50 Hz.

18	Code for speed variant [rpm]. See Codes for speed variant.

**Example 1: NKG 100-65-200/219VAZ1F2KESBQQEXX4**

shows an NKG 100-65-200 pump with these characteristics:

- Super Vortex impeller
- hydraulic version A
- bare shaft pump, oil-lubricated heavy-duty bearing design
- DIN flange to EN 1092-2 pipe connection
- 16 bar flange pressure rating
- stainless steel pump housing, EN 1.4408
- stainless steel impeller, EN 1.4408
- stainless steel wear ring, EN 1.4517
- stainless steel shaft, EN 1.4401
- EPDM O-rings for pump cover and seal cover
- single shaft seal arrangement
- BQQE shaft seal
- bare shaft pump without motor, for 4-pole operation, 60 Hz.

**Example 2: NKGE**

**125-100-160/160-140BSA1F2AESBAQERW1** shows an NKGE 125-100-160 pump with these characteristics:

- 160-140 mm closed impeller, conical trim
- hydraulic version B
- with built-in differential-pressure sensor
- grease-lubricated standard bearing design
- standard coupling
- DIN flange to EN 1092-2 pipe connection
- 16 bar flange pressure rating
- cast iron pump housing, EN-GJL-250
- cast iron impeller, EN-GJL-200
- bronze/brass wear ring
- stainless steel shaft, EN 1.4021/1.4034
- EPDM O-rings for pump cover and seal cover
- single shaft seal arrangement
- BAQE shaft seal
- 30 kW motor, not for sale in North America, 2-pole, 50 Hz.

**Example 3: NKGE**

**200-150-315.2/317ACA1F3AESDAQFYW4** shows an NKG 200-150-315.2 pump with these characteristics:

- 317 mm closed impeller, cylindrical trim
- hydraulic version A
- without built-in sensor, one cable and one pressure sensor are supplied with the pump.
- grease-lubricated standard bearing design
- standard coupling
- DIN flange to EN 1092-2 pipe connection
- 25 bar flange pressure rating
- cast iron pump housing, EN-GJL-250
- cast iron impeller, EN-GJL-200
- bronze/brass wear ring
- stainless steel shaft, EN 1.4021/1.4034
- EPDM O-rings for pump cover and seal cover
- single shaft seal arrangement
- DAQF shaft seal
- motor size outside DOE scope, not for sale in North America, 4-pole, 60 Hz.

### Codes for shaft seals

The digits are only used for double shaft seal solutions.

Digits	Letters	Description
10	BAQE	Single mechanical shaft seal
12	BBQE	Single mechanical shaft seal
13	BBQV	Single mechanical shaft seal
15	BQQE	Single mechanical shaft seal
16	BQQV	Single mechanical shaft seal
19	AQAE	Single mechanical shaft seal
20	AQAV	Single mechanical shaft seal
21	AQQE	Single mechanical shaft seal
22	AQQV	Single mechanical shaft seal
23	AQQX	Single mechanical shaft seal
24	AQQK	Single mechanical shaft seal
25	DAQF	Single mechanical shaft seal
26	DQQE	Single mechanical shaft seal
27	DQQV	Single mechanical shaft seal
28	DQQX	Single mechanical shaft seal
29	DQQK	Single mechanical shaft seal
50	HBQV	Cartridge seal
51	HQQU	Cartridge seal
52	HAQK	Cartridge seal
	SNEA	Stuffing box
	SNEB	Stuffing box
	SNEC	Stuffing box
	SNED	Stuffing box
	SNOA	Stuffing box
	SNOB	Stuffing box
	SNOC	Stuffing box
	SNOD	Stuffing box
	SNFA	Stuffing box
	SNFB	Stuffing box
	SNFC	Stuffing box
	SNFD	Stuffing box

### Letter codes for shaft seals

Pos. 15 in NBG, NBGE, NKG, NKGE type key example.

Code	Description	Explanation
B	Shaft seal type	A: O-ring seal with fixed driver B: Rubber bellows seal D: O-ring seal, balanced H: Cartridge seal, balanced
Q	Material of rotating seal face	A: Carbon, metal-impregnated with antimony which is not approved for potable water B: Carbon, resin-impregnated Q: Silicon carbide
Q	Material of stationary seal	A: Carbon, metal-impregnated with antimony which is not approved for potable water Q: Silicon carbide
E	Material of secondary seal and other rubber and composite parts, except the wear ring	E: EPDM V: FKM (Viton®) F: FXM (Fluoraz®) K: FFKM (Kalrez®) X: HNBR U: Dynamic O-rings in FFKM and static O-rings in PTFE

For a thorough description of shaft seal types and materials, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858".

### Letter codes for stuffing boxes

Example: SNEA

Code	Description	Explanation
S	Stuffing box type	S: Packing type stuffing box
N	Cooling method	N: Uncooled stuffing box
E	Barrier liquid	E: With internal barrier liquid F: With external barrier liquid O: Without barrier liquid
A	Material	A: PTFE-impregnated fibre packing rings (Buraflon®) and EPDM O-rings in the pump housing B: Graphite-PTFE compound packing rings (Thermoflon®) and EPDM O-ring in the pump housing C: PTFE-impregnated fibre packing rings (Buraflon®) and FKM O-ring in the pump housing D: Graphite-PTFE compound packing rings (Thermoflon®) and FKM O-ring in the pump housing

For a thorough description of stuffing boxes and materials, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858".

## Codes for rated motor power

Pos. 16 in NBG, NBGE, NKG, NKGE type key example.

Code	Description	
	[hp]	[kW]
A	0.16	0.12
B	0.25	0.18
C	0.33	0.25
D	0.5	0.37
E	0.75	0.55
F	1	0.75
G	1.5	1.1
H	2	1.5
I	3	2.2
J	4	3
K	5 (5.5 <sup>14</sup> )	3.7 (4 <sup>14</sup> )
L	7.5	5.5
M	10	7.5
N	15	11
O	20	15
P	25	18.5
Q	30	22
R	40	30
S	50	37
T	60	45
U	75	55
V	100	75
W	125	90
X	Bare shaft pump	
Y	> 200 <sup>15</sup>	> 150 <sup>15</sup>
1	150	110
2	175	132
3	200	150
4	215 <sup>16</sup>	160 <sup>16</sup>
5	250 <sup>16</sup>	185 <sup>16</sup>
6	-	26

<sup>14</sup>) Value in bracket is for the standard IEC motor size. Value outside bracket is for the motor size according to NEMA standards.

<sup>15</sup>) Used for pumps where the pump shaft input power exceeds 200 hp (150 kW) and is not regulated under the DOE pump rule.

<sup>16</sup>) Special cases with power sizes above 200 hp (150 kW) which are still regulated under the DOE pump rule. For example: Pump has a P2 value of 198 hp (147.6 kW) in its duty point (in DOE scope) but customer wants the 215 hp (160 kW) motor instead of the 200 hp (150 kW). The pump is in scope of the DOE regulation and requires a PEI value and a motor code.

## Code for DOE identification

Pos. 17 in NBG, NBGE, NKG, NKGE type key example.

Code	Description
A	DOE reported with E-motor (ECM <sup>17</sup> ), 1 x 200-240 V
B	DOE reported with E-motor (ECM <sup>17</sup> ), 3 x 200-240 V
C	DOE reported with E-motor (ECM <sup>17</sup> ), 3 x 440-480 V
D	DOE reported with E-motor (ECM <sup>17</sup> ), 3 x 380-500 V
W	In DOE scope but not complaint with or not for sale in North America
X	DOE reported, sell as bare shaft pump or DOE regulated Motor (CC marked motor)
Y	Pumps not subject to the DOE regulation
Z	DOE reported with Asynchronous E-Motor

<sup>17</sup>) ECM: Electronically Commutated Motor.

## Codes for speed variant

Pos. 18 in NBG, NBGE, NKG, NKGE type key example.

Code	Description
A	1450-2200 RPM, E-motor (ECM <sup>18</sup> )
B	2900-4000 RPM, E-motor (ECM <sup>18</sup> )
C	4000-5900 RPM, E-motor (ECM <sup>18</sup> )
1	2-pole, 50 Hz (Asynchronous motor)
2	2-pole, 60 Hz (Asynchronous motor)
3	4-pole, 50 Hz (Asynchronous motor)
4	4-pole, 60 Hz (Asynchronous motor)
5	6-pole, 50 Hz (Asynchronous motor)
6	6-pole, 60 Hz (Asynchronous motor)
7	8-pole, 50 Hz (Asynchronous motor)
8	8-pole, 60 Hz (Asynchronous motor)

<sup>18</sup>) ECM: Electronically Commutated Motor.

## 6. Construction

### NBG, centre-line outlet

TM067253

Sectional drawing, centre-line outlet

Pos.	Description
A	For stainless steel versions K, L, M, N, P, R, the wear rings are fitted by means of screws.
B	For some stainless steel versions, loose flanges are available.
C	Stub shaft
D	Two-part shaft

## NBG, tangential outlet

TM051526

Sectional drawing, tangential outlet, DN 200 and DN 250

Pos.	Description
A	Stainless steel versions have loose flanges.
B	Two-part shaft

## NBG, material specification

19)

20) At wetted area, up to different models can be stub shaft or two-part shaft per design needs

## NKG, centre-line outlet

TM067239

Sectional drawing, centre-line outlet

Pos.	Description
A	For stainless steel versions K, L, M, N, P, R, the wear rings are fitted by means of screws.
B	For some stainless steel versions, loose flanges are available.

### NKG, tangential outlet

TM051528

Sectional drawing, with tangential outlet, DN 200 and DN 250

Pos.	Description
A250	Stainless steel versions have loose flanges.

## NKG, bearing bracket, oil-lubricated

TM050988

Sectional drawing, bearing bracket, oil-lubricated

**NKG, bearing bracket, grease-lubricated**

TM050989

*Sectional drawing, bearing bracket, grease-lubricated*

## NKG, double seal, tandem

TM050990

Sectional drawing, double tandem seal arrangement

**NKG, double seal, back to back**

TM050991

*Sectional drawing, double seal, back-to-back seal arrangement*

## NKG, cartridge solution

Sectional drawing, cartridge solution

TM050992

**NKG, single seal, split cover**

TM050993

*Sectional drawing, single seal, split cover*

## NKG, stuffing box

TM066931

Sectional drawing, stuffing box, single cover

TM066932

Sectional drawing, stuffing box, split cover

### NKG, material specification

## Mechanical construction

### Mounting design

NBG pumps come in these mounting designs:

#### Mounting design A: pump housing with feet

TM025509

Mounting design A

#### Mounting design B: motor with feet

TM025510

Mounting design B

#### Mounting design C: pump housing and motor with feet

TM025511

Mounting design C

#### Mounting design F: design C with base frame.

TM040483

Mounting design F

### Pump housing

The volute pump housing has an axial inlet port and a radial outlet centre-line port. Flange dimensions are in accordance with EN 1092-2.

For DN 200 outlet and above, the outlet port is tangential.

The pump houses have both a priming and a drain hole closed by plugs.

TM030232

NBG and NKG pump housing with centre-line outlet

### Bearing bracket and shaft

The bearing bracket has two sturdy anti-friction, lubricated-for-life bearings.

The bearing bracket is made of cast iron EN-GJL-250.

The shaft is made of stainless steel. Shaft diameter  $d_5$  is either  $\varnothing 24$ ,  $\varnothing 32$ ,  $\varnothing 42$ ,  $\varnothing 48$  or  $\varnothing 60$  where the coupling is mounted.

A thrower on the shaft prevents liquid from entering the bearing bracket. In stuffing box versions, the shaft is protected by a stainless steel sleeve.

TM030233

Bearing bracket and shaft

All NKG pumps are fitted with one of five shaft, shaft seal and bearing sizes. As the bearings and shafts are large, the NKG pumps can be driven by a belt drive or a diesel engine, if required.

For prolonged lifetime and to suit high inlet pressure, heavy duty bearing brackets are available. See the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858", or contact Grundfos.

### Stuffing boxes

Stuffing boxes are available as pure packing rings or as packing rings with graphite seals. Stuffing box packing rings with graphite seals have proven their qualities in a wide range of applications, especially under extreme conditions, such as high pressure or high temperature, or operation with oils or aggressive liquids.

Braided material is effective for ensuring long service life for packing rings while protecting the shaft sleeve when used in pumps. When fitted, these packing rings are symmetrical, having parallel facings that rule out tilting.

TM002584

Uncooled stuffing box, type SNE(x), with internal barrier liquid for the pumping of clean liquids in suction operation or at inlet pressures up to 4 bar

TM002585

Uncooled stuffing box, type SNO(x), without internal barrier liquid for the pumping of clean liquids in suction operation or at inlet pressures over 4 bar

TM002586

Uncooled stuffing box, type SNF(x), with external barrier liquid for the pumping of contaminated and malodorous liquids and for applications with continuous vacuum on the inlet (constant inlet pressure below atmosphere pressure)

### Pump cover design

42	Single <sup>21)</sup>	Split <sup>22)</sup>
48	Split <sup>22)</sup>	Split <sup>22)</sup>
60	Split <sup>22)</sup>	Split <sup>22)</sup>

21) See fig. Sectional drawing, stuffing box, single cover.

22) See fig. Sectional drawing, stuffing box, split cover.

### Related information

[NKG, stuffing box](#)

### Motor stool and cover

The cover is provided with a manual air vent screw for the venting of the pump housing and the shaft seal chamber. An O-ring forms the seal between cover and pump housing.

Coupling guards are fitted to the motor stool.

The mounting designations of motors for NBG, NBGE are as follows:

- IM B5: up to and including frame size 132.
- IM B35: as from frame size 160 and upwards.

The flange size of the motor stool is according to IEC 60034.

### Shaft

The stainless steel shaft is  $\varnothing 28$ ,  $\varnothing 38$ ,  $\varnothing 48$ ,  $\varnothing 55$  or  $\varnothing 60$  where the shaft seal is mounted.

The coupling end of the shaft is cylindrical and has two drilled holes for the set screws of the coupling.

TM029500

Stub shaft, NBG pump

TM035393

2-part stub shaft, NBG pump

## Coupling

NKG pumps are available with two types of coupling:

- standard coupling
- spacer coupling.

Standard coupling

Spacer coupling

Pumps fitted with a spacer coupling can be serviced without dismantling the motor from the base frame and without removing the pump housing from the pipes. This saves realignment of pump and motor after service.

For couplings for ATEX-approved pumps, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858".

## Impeller

The impeller is a closed impeller with double-curved blades with smooth surfaces. This ensures high efficiency.

Impeller, NBG and NKG pumps

All impellers are statically and hydraulically balanced. The hydraulic balancing compensates for axial thrust.

The direction of rotation of the impeller is clockwise when viewed from the motor.

All impellers can be adapted to the duty point as requested by the customer.

## Base frame

NKG pumps are available with two types of base frame.

### EN/ISO base frame

Schematic view of NKG pump mounted on an EN/ISO base frame

Pump and motor are mounted on a common steel base frame in accordance with EN 23661. The largest base frames, larger than size 9, are not described in any standard and therefore not in accordance with EN 23661. The base frame may be longer than the pump and motor. An EN/ISO base frame prepared for grouting is available as an option. See fig. Base frame prepared for grouting.

### C-channel base frame

Schematic view of NKG pump mounted on a C-channel base frame

Pump and motor are mounted on a common steel base frame optimised for the length of the pump and motor. Dimensions are not in accordance with EN 23661. All C-channel base frames can be grouted.

### Related information

[Foundation and grouting](#)

### Surface treatment

The cast iron parts of NBG and NKG pumps have an epoxy-based coating made in a cathodic electro-deposition CED process. CED is a high-quality dip-painting process where an electrical field around the products ensures deposition of paint particles as a thin, well-controlled layer on the surface. An integral part of the process is a pretreatment. The entire process consists of these elements:

- alkaline-based cleaning
- zinc phosphating
- cathodic electro-deposition
- curing to a dry film thickness of 18-22 µm.

The colour code for the finished product is NCS 9000/AL 9005.

For low-temperature applications at high humidity, Grundfos offers NBG and NKG pumps with extra surface treatment to avoid corrosion. These pumps are available on request.

### Test pressure

Pressure testing was made with 20 °C water containing corrosion inhibitor.

Pressure stage	Operating pressure		Test pressure	
	[bar]	[MPa]	[bar]	[MPa]
PN 10	10	1.0	15	1.5
PN 16	16	1.6	24	2.4
PN 25	25	2.5	37.5	3.75

### Motors and drives

For NBG, NBGE, NKG, NKGE pumps Grundfos can provide a wide range of motors and drives within these two main categories:

- standard motors
- speed-controlled motors.

Standard motors are mains-operated whereas the speed-controlled motors can be started and operated in various ways.

The speed-controlled NBG, NKG pumps can be driven in two ways:

- by a standard motor with an external frequency converter. The frequency converter can be a Grundfos CUE solution or another make.
- by a motor with an integrated frequency converter, a Grundfos MGE motor.

#### Standard motors

The motor is a totally enclosed, fan-cooled standard motor with main dimensions according to IEC and DIN standards. Electrical tolerances are to IEC 60034.

#### Motor protection

Three-phase motors must be connected to a motor-protective circuit breaker according to local regulations.

Three-phase Grundfos MG motors as from 3 kW have a built-in PTC thermistor according to DIN 44082 (IEC 34-11: TP 211).

#### Energy efficiency classification

**IE1    IE2    IE3**  
**IE4    IE5**

Grundfos does not offer IE1 motors any longer and only offers IE2 motors for 4-pole from 0.25 -0.55 kW.

## Speed-controlled standard motors

### General considerations

If you connect an external frequency converter to your standard motor, the motor insulation is exposed to higher voltage peaks due to the operation of the frequency converter. This causes the motor to be more noisy than in normal operation. In addition, large motors are exposed to bearing currents caused by the frequency converter.

If you operate the motor via a frequency converter, consider the following:

- In 2-, 4- and 6-pole motors, frame size 225 and up, isolate one of the motor bearings electrically to prevent damaging currents from passing through the motor bearings.
- In noise-sensitive applications, you can reduce the motor noise by fitting a dU/dt filter between the motor and the frequency converter. For particularly noise-sensitive applications, we recommend a sinusoidal filter.
- The length of the cable between motor and frequency converter affects the motor load. Therefore, check that the cable length meets the specifications laid down by the frequency converter supplier.
- For supply voltages between 500 and 690 V, fit a dU/dt filter to reduce voltage peaks, or use a motor with reinforced insulation.
- For supply voltages of 690 V, use a motor with reinforced insulation, and fit a dU/dt filter.

## Grundfos CUE

### Pumps connected to Grundfos CUE external frequency converters

TM1040611

#### Grundfos CUE frequency converters

Grundfos CUE is a complete range of wall-mounted frequency converters for pump control in a wide range of applications.

Grundfos CUE provides a variety of benefits to the end-user, such as:

- Grundfos E-pump functionality and user interface
- application- and pump family-related functions
- increased comfort compared to fixed-speed pump solutions
- simple installation and commissioning compared to standard frequency converters
- speed control of pumps up to 250 kW.

#### Intuitive startup guide

The startup guide enables easy installation and commissioning as well as plug-and-pump convenience. Few settings need to be made by the installer as the rest is done automatically or preset from the factory.

## Smart user interface

Grundfos CUE user interface

Grundfos CUE features a unique user-friendly operating panel with graphic display and easy-to-use buttons.

### Controlling the selected parameter

Grundfos CUE has a built-in PI controller offering closed-loop control of these parameters:

- constant differential pressure
- proportional pressure
- constant temperature
- constant flow rate.

### Wide product range

The CUE product range is quite comprehensive, covering five different voltage ranges, enclosure classes IP20/21 (NEMA 1) and IP54/55 (NEMA 12), and a wide range of output powers.

The table below provides a general overview.

Input voltage [V]	Output voltage [V]	Motor [kW]
1 x 200-240	3 x 200-240	1.1 - 7.5
3 x 200-240	3 x 200-240	0.75 - 45
3 x 380-500	3 x 380-500	0.55 - 250
3 x 525-600	3 x 525-600	0.75 - 7.5
3 x 525-690	3 x 525-690	11-250

### External communication

Grundfos CUE can communicate by means of LON, PROFIBUS, Modbus or BACnet via Grundfos CIU.

## E-solution range

# IE5

NBGE, NKGE pumps with a motor with an integrated frequency converter

TM043283

TM081605

TM084934

The MGE motor is a totally enclosed, fan-cooled, frequency-controlled motor with dimensions according to IEC and DIN standards. Electrical tolerances are to IEC 60034.

### Motor protection

The motor requires no external motor protection. MGE motors incorporate thermal protection against steady overload and stalled condition (IEC 34-11: TP 211).

### Benefits

Grundfos MGE motors provide a variety of benefits to the end-user, such as:

- Grundfos E-pump functionality and user interface
- a perfect match between pump and frequency drive
- application- and pump family-related functions
- increased comfort compared to fixed-speed pump solutions
- simple installation and commissioning compared to standard frequency converters.

**Smart user interface**

TM081606

Grundfos MGE motors feature a user-friendly operating panel with easy-to-use buttons.

**Controlling the selected parameter**

Grundfos MGE has a built-in PI controller offering closed-loop control of these parameters:

- constant differential pressure
- proportional pressure
- constant temperature
- constant flow rate.

**External communication**

Grundfos MGE can communicate by means of LON, PROFIBUS, Modbus or BACnet as described in section Communication with E-pumps.

**Related information**

[Communication with E-pumps](#)

**Optional motors**

The Grundfos standard range of motors covers a wide variety of application requirements. However, for special applications or operating conditions, custom-built motor solutions can be provided.

For special applications or operating conditions, Grundfos offers custom-built motors such as:

- ATEX-approved motors
- MG motors with anti-condensation heating unit
- motors with thermal protection.

# IE4 IE5

NBGE, NKGE pumps combined with a Grundfos CUE and Siemens IE4 motor or Nidec IE5 motor.

TM081604

TM081608

**Benefits**

Grundfos CUE functionality:

- a perfect match between pump and frequency drive
- increased comfort and reduced power consumption compared compared to fixed-speed pump solution
- simple installation and commissioning compared to external mounted frequency drive
- space saving.

**E-solution range**

Pole	IE class	P2 [kW]

<sup>25)</sup> Nidec motor with integrated CUE

## 7. Operating conditions

### Pump location

The pump is designed for installation in a non-aggressive and non-explosive atmosphere.

The relative air humidity must not exceed 95 %.

### Ambient temperature and installation altitude

The ambient temperature and the installation altitude are important factors for the motor life, as they affect the life of the bearings and the insulation system.

The installation altitude is the height of the installation site above sea level.

If the ambient temperature exceeds the recommended maximum ambient temperature or maximum altitude above sea level, see figure Maximum motor output in relation to ambient temperature and altitude, the motor must not be fully loaded due to the low density and consequently low cooling effect of the air. In such cases, it may be necessary to use a motor with a higher output.

### Pump with standard motor

#### Ambient temperature

Motor make	Motor P2	Permissible ambient temperature
MG	0.25 - 0.55 kW	-20 to +40 °C
	0.75 - 22 kW	-20 to +60 °C
Siemens	0.75 - 462 kW	-20 to +55 °C
MMG	0.75 - 450 kW	-20 to +60 °C

#### Maximum motor output in relation to ambient temperature and altitude

Motor make	Motor P2	Derating curve
MG	0.25 - 0.55 kW	curve 1
	0.75 - 22 kW	curve 2
Siemens	0.75 - 462 kW	curve 3
MMG	0.75 - 450 kW	curve 2

TM044914

Maximum motor output in relation to ambient temperature and altitude

Example with a pump with a 1.1 kW IE3 MG motor:

If the pump is installed 4750 m above sea level, the motor must not be loaded more than 88 % of rated output.

At an ambient temperature of 75 °C, the motor must not be loaded more than 78 % of rated output. If the pump is installed 4750 m above sea level at an ambient temperature of 75 °C, the motor must not be loaded more than 88 % x 78 % equal to 68.6 % of the rated output.

### Pump with Grundfos MGE motor

#### Ambient temperature

Motor make	Motor P2	Permissible ambient temperature
Grundfos MGE	1.1 - 11 kW, 2-pole	-20 to +50 °C
	15-22 kW, 2-pole	-20 to +40 °C
	0.55 - 7.5 kW, 4-pole	-20 to +50 °C
	11-22 kW, 4-pole	-20 to +40 °C

The motor can operate with the rated power output, P2, at 50 °C, but continuous operation at higher temperatures reduces the expected product life. If the motor is to operate at ambient temperatures between 50 and 60 °C, select an oversize motor.

Contact Grundfos for further information.

**Installation altitude**

Motors installed up to 1000 metres above sea level can be loaded 100 %.  
 Motors installed more than 1000 metres above sea level must not be fully loaded due to the low density and consequent low cooling effect of the air.  
 Installation altitude is the height above sea level of the installation site.  
 Motors installed up to 1000 m above sea level can be loaded 100 %.  
 The motors can be installed up to 3500 m above sea level.

TM055243

Motor output power in relation to altitude

Pos.	Description
A	P2 [%]
B	Altitude [m]

In order to maintain the galvanic isolation and ensure correct clearance according to EN 60664-1:2007, you must adapt the supply voltage to the altitude:

TM069866

Supply voltage for three-phase motor in relation to altitude

Pos.	Description
A	Supply voltage [V]
B	Altitude [m]

TM069867

Supply voltage for single-phase motor in relation to altitude

Pos.	Description
A	Supply voltage [V]
B	Altitude [m]

**Note:**

If the motor is to operate at ambient temperatures between 50 and 60 °C, select an oversized motor. Contact Grundfos.

**E-pump with Siemens motor with integrated CUE**

**Ambient temperature**

Siemens motor with integrated CUE	-10 to +50 °C
-----------------------------------	---------------

**Installation altitude**

Derating must be taken into account when using CUE in these situations:

- low air pressure (heights)
- low speeds
- installations with long motor cables
- cables with a large cross-section
- high ambient temperature.

The required action is described in the next sections.

## Low air pressure

At low air pressure, the cooling capability of air is reduced. At altitudes above 1000 m (3280 ft), the maximum output current should be derated in accordance with the diagram in the figure below.

TM040222

### Derating of output current at low air pressure

At altitudes above 2000 m (6561 ft), the PELV requirements cannot be met.

PELV = Protective Extra Low Voltage.

An alternative is to lower the ambient temperature at high altitudes and thereby ensure 100 % output current at high altitudes.

### Example

At an altitude of 2000 m (6561 ft), the output current 24.0 A of the selected CUE must be derated to 92 % according to figure Derating of output current at low air pressure.

This is equal to 22.1 A and lower than the maximum motor current 23.6 A. The selection is not valid.

Data of the new selected CUE:

Max. output current:	32.0 A
Typical shaft power:	15.0 kW (20 hp)
Product number (IP20):	96754695

Calculation of derated current at an altitude of 2000 m (6561 ft):

Maximum output current =  $32.0 \times 0.92 = 29.4$  A.

This is higher than the maximum motor current 23.6 A.

The new selection is valid.

## High ambient temperature

If the output current is reduced to 80 % of the nominal output current of the CUE in question, the ambient temperature may be 5 °C (41 °F) higher.

The other possibility is to use a unit one size bigger. For higher temperature increases, bigger units are required. The efficiency of the CUE will, however, be reduced at higher temperatures.

If the CUE gets too hot, it will reduce the switching frequency.

Note that the nominal temperature rating depends on the enclosure type.

The maximum ambient temperature of the different enclosures can be found in section Technical data.

## Flow rates

### Minimum flow rate

The pump must not run against a closed outlet valve as this causes an increase in temperature or formation of steam in the pump. This may cause shaft damage, impeller erosion, short life of bearings, damage to stuffing boxes or mechanical shaft seals due to stress or vibration.

The continuous flow rate must be at least 10 % of the maximum flow rate.

### Maximum flow rate

The maximum flow rate must not be exceeded as otherwise there is a risk of for instance cavitation and overload.

The maximum flow rate can be read either from the performance curve pages or from a curve on a specific pump when selecting it in Grundfos Product Center.

TM051652

Example from Grundfos Product Center showing minimum and maximum flow rate

Pos.	Description
1	Minimum flow rate
2	Maximum flow rate

## Sound pressure level

Data in this table apply for pump including motor.

Motor [kW]	Maximum sound pressure level [dB(A)] - ISO 3743			
	Three-phase motors			
	2-pole	4-pole	6-pole	8-pole
0.25	56	41	-	-
0.37	56	45	-	-

## Liquid temperatures

Liquids with temperatures ranging from -25 to +140 °C are covered in this data booklet.

For liquids from -40 to +220 °C, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858", or contact Grundfos. In that data booklet, you will also find information about the seals being used for other liquids than water and glycols, i.e. oils, chemicals and silicone oil. Further seal types are also described to support more application types and pumped liquids.

The maximum liquid temperature is stamped on the nameplate.

Note that the maximum liquid temperature limits stated by Grundfos may be overruled by local regulations and various laws.

## Operating range of mechanical shaft seals

The temperature range applies to water and coolants.

Seals with a temperature range of 0 °C and up are mainly used for pumping water, while seals for temperatures below 0 °C are mainly intended for coolants.

<b>Shaft seal diameter [mm]</b>	<b>NBG, NKG</b>	<b>28, 38</b>	<b>48</b>	<b>55</b>	<b>60</b>
<b>d5 [mm]</b>	<b>NKG</b>	<b>24, 32</b>	<b>42</b>	<b>48</b>	<b>60</b>

<sup>26)</sup> Shaft seals with drinking water approvals.

<sup>27)</sup> For ultra pure water applications having a conductivity lower than 2 microSiemens, contact Grundfos for a special shaft seal version.

## Recommended shaft seal for water-glycol mixture

TM061032

Operating range of EPDM shaft seals

Pos.	Description
1	Glycol content [%]
2	Temperature [°C]

### Carbon-silicon carbide (xAQx), (xBQx)

Mechanical shaft seals with carbon-silicon carbide seal faces have a wide range of applications and are especially suitable if there is risk of dry running and/or if the temperature is high. These mechanical shaft seals are not suitable for liquids containing abrasive particles as the carbon parts will be worn. At temperatures below 0 °C, corrosion inhibitors containing abrasive particles are usually added to the pumped liquid, and these seals will thus not be suitable.

**Note:** The antimony impregnation (A) is not approved for potable water applications.

### Silicon carbide-silicon carbide (xQQx)

Mechanical shaft seals with silicon carbide-silicon carbide seal faces also have a very wide range of applications. These seals are very resistant to abrasive particles and well suited at liquid temperatures up to 90 °C for Q<sub>1</sub> types, and up to 120 °C for Q<sub>6</sub> types. At higher temperatures, the reduced lubricating properties of the pumped liquid may cause noise problems and limit the life of the seal faces.

TM061034

Operating range of FKM shaft seals

Pos.	Description
1	Glycol content [%]
2	Temperature [°C]

### EPDM (xxxE)

Mechanical shaft seals with EPDM (xxxE) rubber are primarily suitable for water.

If the water contains oil or if chemicals or other liquids than water are pumped, you may have to replace the rubber parts of the mechanical shaft seal.

### FKM (xxxV)

Mechanical shaft seals with FKM (xxxV) rubber have excellent resistance against oil and a number of chemicals.

## Operating range of stuffing boxes

T: Thermoflon®, graphite-PTFE compound packing rings

29) The temperature range applies to water and coolants.

## Pressures in the pump

### Maximum operating pressure

TM075513

- The pump is operating in an open system with suction lift.
- The liquid is sucked through long pipes.
- The inlet conditions are poor.
- The operating pressure is low.

### Maximum inlet pressure

The inlet pressure + pump pressure must be lower than the maximum operating pressure (p) stated on the pump nameplate. The maximum operating pressure can be checked by closing the outlet valve briefly for maximum 30 seconds.

### Pressures in the pump

Pos.	Description
1	Maximum operating pressure (pressure above atmospheric pressure)
2	Pump pressure
3	Inlet pressure

The inlet pressure + pump pressure must be lower than the maximum operating pressure (p) stated on the pump nameplate. The maximum operating pressure can be checked by closing the outlet valve briefly for maximum 30 seconds.

### Minimum inlet pressure

The minimum inlet pressure must be according to the NPSH curve + correction for Vapour pressure. We do, however, recommend that you calculate the inlet pressure in these cases:

- The liquid temperature is high.
- The flow rate is considerably higher than the pump's rated flow rate.

### Suction lift in open systems

#### Calculation of suction lift in open systems (water)

The suction lift "H" in metres head required during operation to avoid cavitation in the pump can be calculated by means of the following formula:

$$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v$$

<b>H</b>	Suction lift
<b>p<sub>b</sub></b>	Barometric pressure in bar. The barometric pressure can be taken as equal to 1 bar. In closed systems, p <sub>b</sub> indicates system pressure in bar.
<b>NPSH</b>	Net Positive Suction Head in metres head. The NPSH value can be read from the NPSH curve at the highest flow rate the pump will be delivering. The maximum flow rate must not exceed the maximum flow rate shown on the QH curve. The NPSH curve and QH curve for the individual pump can be found in Grundfos Product Center and in the relevant data booklet.
<b>H<sub>f</sub></b>	Friction loss in the inlet pipe in metres head at the highest flow rate the pump will be delivering.
<b>H<sub>v</sub></b>	Vapour pressure in metres head. See figure below.

Relation between liquid temperature and vapour pressure

### Positive H value

#### Example:

Liquid temperature:	20 °C
Pump type:	NKG 80-50-200/219, 2-pole, 50 Hz
Flow rate:	70 m <sup>3</sup> /h
p <sub>b</sub> :	1 bar
NPSH:	2.8 m head
H <sub>f</sub> :	3.0 m head
H <sub>v</sub> :	0.24 m head
$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v$ [m head]	
$H = 1 \times 10.2 - 2.8 - 3.0 - 0.24 = 4.16$ m head	

If the calculated value of H is positive, the pump can operate with a maximum suction lift of H metres.

TM081003

Suction lift with positive H

### Negative H value

#### Example:

Liquid temperature:	90 °C
Pump type:	NKG 80-50-200/219, 2-pole, 50 Hz
Flow rate:	70 m <sup>3</sup> /h
p <sub>b</sub> :	1 bar
NPSH:	2.8 m head
H <sub>f</sub> :	3.0 m head
H <sub>v</sub> :	7.2 m head
$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v$ [m head]	
$H = 1 \times 10.2 - 2.8 - 3.0 - 7.2 = -2.8$ m head	

If the calculated value of H is negative, a minimum suction head of H metres is required. The calculated H must be present during operation.

TM081004

Suction lift with negative H

TM003037

## 8. Mechanical installation

### Foundation and grouting

#### Foundation

We recommend that you install the pump on a plane and rigid concrete foundation which is heavy enough to provide permanent support for the entire pump. The foundation must be capable of absorbing any vibration, normal strain or shock. As a rule of thumb, the weight of the concrete foundation must be 1.5 times the weight of the pump.

The foundation must be 100 mm larger than the base frame on all four sides. See figure below.

Foundation,  $X$  is equal to minimum 100 mm

The minimum height of the foundation ( $h_f$ ) can then be calculated:

$$h_f = \frac{m_{\text{pump}} \times 1.5}{L_f \times B_f \times \delta_{\text{concrete}}}$$

The density ( $\delta$ ) of concrete is usually taken as 2200 kg/m<sup>3</sup>.

Place the pump on the foundation, and fasten it. The base frame must be supported under its entire area. See figure below.

Correct foundation

Incorrect foundation

Base frame prepared for grouting

#### Grouting

Grouting compensates for uneven foundation, distributes the weight of the unit, dampens vibrations and prevents shifting.

All NKG pumps can be delivered with base frames prepared for grouting as an option. NBG pumps with base frames are always prepared for grouting.

For 2-pole NKG and NBG pumps with motors as from 55 kW, grouting of the base frame is mandatory in order to prevent vibration energy from the rotating motor and the liquid flow.

Use an approved, non-shrinking grout. If in doubt, contact your grout supplier.

Reinforcing steel bars embedded in foundation

Use reinforcing steel bars embedded in the foundation to ensure proper grouting.

Build a strong formwork around the foundation.

TM034324

TM034587

TM033771

TM033950

TM040490

Soak the top of the concrete foundation thoroughly, and remove surface water.

Fill the formwork with grout up to the base frame top level. See figure below. Allow the grout to dry thoroughly before attaching pipes to the pump. 24 hours is sufficient time with approved grouting procedure.

When the grout has thoroughly hardened, check the anchor bolt nuts and tighten, if necessary.

Approximately two weeks after the grout has been poured, or when the grout has thoroughly dried, apply an oil-based paint to the exposed edges of the grout to prevent air and moisture from getting into contact with the grout.

TM032946

Sectional view of foundation with anchor bolt, grouting and base frame

Pos.	Description
1	Base frame
2	Grout
3	Levelling wedges or shims left in place
4	Top of foundation (rough)
5	19 to 32 mm grout
6	Formwork

## Pipes

### Pipes

When installing the pipes, make sure that the pump housing is not stressed by the pipes.

The inlet and outlet pipes must be of an adequate size, taking the pump inlet pressure into account.

Install the pipes so that air locks are avoided, especially on the inlet side of the pump. See figure below.

TM002263

### Pipelines

Fit isolating valves on either side of the pump to avoid having to drain the system if the pump needs to be cleaned or repaired.

Make sure that the pipes are adequately supported as close to the pump as possible, both on the inlet and the outlet side. The counterflanges must lie true against the pump flanges without being stressed as this would cause damage to the pump.

TM053488

### Pipeline mounting

## Direct mounting in pipes

NBG pumps of mounting design A are suitable for direct mounting in supported pipes.

*Direct mounting in pipes*

This type of installation does not allow the use of expansion joints.

**Note:** To ensure quiet operation, the pipes must be suspended from suitable pipe hangers.

## Condensation cover

When installing the pumps outdoors, provide the motor with a suitable cover to protect the pump and motor against the direct effects of the elements.

When mounting the condensation cover on top of the motor, make sure to leave enough space for the air to cool the motor.

*Motors with condensation cover*

## Elimination of noise and vibrations

In order to achieve optimum operation and minimum noise and vibration, consider vibration dampening of the pump. Generally, always consider this for pumps with motors above 15 hp (11 kW). Smaller motor sizes, however, may also cause undesirable noise and vibration.

Noise and vibration are generated by the revolutions of the motor and pump and by the flow in pipes and fittings. The effect on the environment is subjective and depends on correct installation and the state of the remaining system.

Elimination of noise and vibrations is best achieved by means of vibration dampers and expansion joints. See figure Pipeline mounting.

### Vibration dampers

To prevent the transmission of vibrations to buildings, we recommend that you isolate the pump foundation from building parts by means of vibration dampers.

The selection of the right vibration damper requires the following data:

- forces transmitted through the damper
- motor speed considering speed control, if any
- required dampening in %; the suggested value is 70 %.

The selection of vibration damper differs from installation to installation. In certain cases, a wrong damper may increase the vibration level. Vibration dampers must therefore be sized by the supplier of the vibration dampers.

If you install the pump on a foundation with vibration dampers, always fit expansion joints on the pump flanges. This is important to prevent the pump from "hanging" in the flanges.

### Expansion joints

Install expansion joints for these purposes:

- to absorb expansions or contractions in the pipes caused by changing liquid temperature
- to reduce mechanical strains in connection with pressure surges in the pipes
- to isolate mechanical structure-borne noise in the pipes; this applies only to rubber bellows expansion joints.

**Note:** Do not install expansion joints to make up for inaccuracies in the pipes, such as centre displacement or misalignment of flanges.

Fit the expansion joints at a minimum distance of 1 to 1 1/2 pipe diameters (DN) away from the pump on the inlet and the outlet side. This prevents turbulence in the joints, thus ensuring optimum suction conditions and minimum pressure loss on the outlet side. At flow velocities greater than 5 m/s, we recommend that you fit larger expansion joints matching the pipes.

TM053337

TM079060

The illustration below shows examples of rubber bellows expansion joints with or without limiting rods.

TM024979

TM024981

*Rubber bellows expansion joints with and without limiting rods*

Expansion joints with limiting rods can be used to reduce the effects of the expansion or contraction forces on the pipes. We always recommend expansion joints with limiting rods for flanges larger than DN 100.

Anchor the pipes in such a way that they do not stress the expansion joints and the pump. Follow the supplier's instructions and pass them on to advisers or pipe installers.

The illustration below shows an example of a metal bellows expansion joint with limiting rods.

TM024980

*Metal bellows expansion joint with limiting rods*

Due to the risk of rupture of the rubber bellows, metal bellows expansion joints may be preferred at temperatures above 100 °C combined with high pressure.

**Related information**

[Pipes](#)

**Alignment**

Alignment applies only to NKG, NKGE pumps.

In a complete pump unit assembled and supplied from factory, the coupling halves have been accurately aligned. Alignment is made by inserting shims under the pump and motor mounting surfaces as required.

The pump-motor alignment may be affected during transport. Always check alignment after the pump has been installed.

If misalignment has occurred due to radial or angular shifting, realign by inserting or removing shims under the feet of the pump or the motor.

Take care to align carefully, as this increases the lives of the coupling, bearings and shaft seal considerably.

**Note:** Check the final alignment when the pump has obtained its operating temperature under normal operating conditions.

## 9. Speed-controlled pumps

NBG and NKG pumps are available with MGE motors with integrated speed control. These pumps are also called E-pumps and the pump designation is NBGE and NKGE. E-pumps are suitable for applications where the pressure, temperature, flow rate or another parameter is to be controlled on the basis of signals from a sensor at some point in the system.

NBGE, NKGE pumps without sensors from the factory

E-pump type	4000 RPM	2000/2200 RPM
NBGE, NKGE	1.1 - 22 kW	0.55 - 22 kW

E-pumps performance range

Pumps larger than 22 kW, 2-pole and 22 kW, 4-pole, and 6- and 8-pole can be connected to an external frequency converter.

The integrated speed control enables the pump to operate at any duty point between 25 % and 100 % speed. The performance adapts to current conditions and keeps the energy consumption at a minimum.

The 100 % curve corresponds to the curve of a pump with a mains-operated motor.

Duty range of E-pumps

As a part of the duty range as shown in the figure below, the pumps with MGE motor can operate at speeds up to 110 %.

Example on extended performance range up to 110 % as a part of the operation range

The extended range is achieved by means of optimised software which utilises the MGE motor to its maximum in an optimum way. As a result, the E-pump is able to deliver higher head and flow rate with the same motor size. The curve sheets in this data booklet only show the nominal 100 % Q-H curve of pumps with standard motors. You may find information on the extended performance range in Grundfos Product Center.

## Why select an E-pump

The main reasons for choosing the Grundfos E-motor instead of a conventional standard motor and separate frequency converter are the following:

1. Unique product
  - The motor and frequency converter are perfectly matched. The customer will not experience the same problems which may occur when using a standard motor with separate frequency converter, such as noise due to switch frequency.
  - Predefined intelligent control modes, such as constant pressure and constant level. These predefined control modes make it easy to fit the pump into any application.
2. Full application adaptation
  - Functionality is matched to the specific pump application.
  - Grundfos makes a customised configuration file to suit the customer's requirements.
  - Full adaptation to any control management system by means of various interfaces.
3. Simple and easy installation
  - Reduced installation and wiring costs compared to standard frequency converters.
  - No further programming required. An E-motor is a plug-and-pump product.
  - On-site customisation of the software configuration file to adapt to changed operating parameters.
  - Control, monitor, install, commission, and email reports all from your smart device via the Grundfos GO technology.
4. One supplier
  - Complete product is supplied by one sole supplier. This gives the customer security as only one supplier needs to be contacted in case of problems or complaints.

For more information on the E-pumps for NBGE and NKGE and detailed functionalities, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858".

## Maximum speed of the impeller

For stainless steel impellers, the limit is 4000 RPM regardless of impeller size.

### Affinity equations

Normally, NBGE, NKGE pumps are used in applications characterised by a variable flow. Consequently, it is not possible to select a pump that is constantly operating at its optimum efficiency.

To achieve optimum operating economy, select the pump on the basis of the following criteria:

- The maximum duty point required must be as close as possible to the QH curve of the pump.
- The flow rate at the duty point required must be close to the optimum efficiency (eta) for most operating hours

Between the minimum and maximum performance curve, NBGE, NKGE pumps have an infinite number of performance curves each representing a specific speed. It may therefore not be possible to select a duty point close to the maximum curve.

TM014916

Minimum and maximum performance curves

Pos.	Description
1	Maximum curve
2	Minimum curve

In situations where it is not possible to select a duty point close to the maximum curve, use the affinity equations below. The head (H), the flow rate (Q) and the input power (P) are the appropriate variables you need to be able to calculate the motor speed (n).

**Note:** The approximated formulas apply on condition that the system characteristic remains unchanged for  $n_n$  and  $n_x$  and that it is based on the formula  $H = k \times Q^2$ , where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

Finally, it is worth noting that the efficiencies of the frequency converter and the motor must be taken into account if a precise calculation of the power saving resulting from a reduction of the pump speed is wanted.

TM008720

#### Affinity equations

$H_n$	Rated head in m
$H_x$	Actual head in m
$Q_n$	Rated flow rate in m³/h
$Q_x$	Actual flow rate in m³/h
$P_n$	Rated input power in kW
$P_x$	Actual input power in kW
$n_n$	Rated motor speed in min <sup>-1</sup>
$n_x$	Actual motor speed in min <sup>-1</sup>
$\eta_n$	Rated efficiency in %
$\eta_x$	Actual efficiency in %

### Grundfos Product Center

Grundfos Product Center are selection programs offered by Grundfos.

The two programs make it possible to calculate the specific duty point and energy consumption of an NBGE or NKGE pump.

When you enter the pump data, Grundfos Product Center can calculate the exact duty point and energy consumption. For further information, see section Grundfos Product Center.

When you press the button, the stop icon appears at the bottom of the display.
6		<b>Home:</b> Press the button to go to the <b>Home</b> menu.

## Grundfos GO

### Grundfos GO, up to 11 kW medium speed and 7.5 kW low speed

The pump is designed for wireless radio or infrared communication with Grundfos GO.

Grundfos GO enables setting of functions and gives access to status overviews, technical product information and actual operating parameters.

Grundfos GO offers the following mobile interface, MI.

TM066256

Grundfos GO communicating with the pump via radio or infrared connection, IR

Pos.	Description
1	Grundfos MI 301: Separate module enabling radio or infrared communication. You can use the module in conjunction with an Android or iOS-based smart device with Bluetooth connection.

### Grundfos GO, from 15-26 kW medium speed and 11-22 kW low speed

The product is designed for wireless communication with Grundfos GO using Bluetooth (BLE).

Grundfos GO enables you to set functions and gives you access to status overviews, technical product information and current operating parameters.

TM082930

## Communication

When Grundfos GO initiates communication with the pump, the indicator light in the middle of Grundfos Eye flashes green. See section Priority of settings.

Furthermore, on pumps fitted with an advanced control panel a text appears in the display saying that a wireless device is trying to establish connection. Press **OK** on the pump in order to establish connection with Grundfos GO or press **Home** to reject connection.

Establish communication using one of these communication types:

- radio communication
- infrared communication
- Bluetooth communication

## Communication with E-pumps

Communication with E-pumps is possible via a central building management system, remote control (Grundfos GO) or operating panel.

### Central building management system

The operator can communicate with an E-pump at a distance by means of the CIU or CIM. Communication can take place via a central building management system allowing the operator to monitor and change control modes and setpoint settings.

The CIU unit can be used for all E-pumps and CIM module can only be used for pumps with MGE/MLE motors. Both can be ordered as accessory. For ordering details, see section CIU communication interface units and CIM communication interface modules.

## 10. Pumps connected in parallel

### Control of pumps connected in parallel

In some applications, parallel pump operation is required for one or more of the following reasons:

- One pump cannot achieve the required performance or flow rate.
- Standby capacity is required to ensure reliability of supply.
- Overall efficiency needs to be improved in case of big variations in the flow rate demand.

NB, NBE, NK, NKE pumps connected in parallel can be controlled by Control MPC.

Control MPC

### Pumps connected to Control MPC

NBG, NBGE, NKG, NKGE pumps can be connected directly to Grundfos Control MPC.

Control MPC incorporates, among others, a CU 352 controller that can control up to six pumps.

By means of an external sensor, Control MPC can ensure optimum adaptation of the performance to the demand by closed-loop control of these parameters:

- proportional differential pressure
- constant differential pressure
- differential pressure, remote
- flow rate
- temperature.

CU 352 incorporates features such as those below:

#### Related information

[24. Grundfos Product Center](#)

#### Startup wizard

Correct installation and commissioning is a prerequisite for attaining optimum performance of the system and trouble-free operation year in and year out.

During commissioning of the system, a startup wizard is shown on the display of the CU 352. The wizard guides the operator through the various steps via a series of dialogue boxes to ensure that all settings are done in the correct sequence.

#### Application-optimised software

CU 352 incorporates application-optimised software which helps you set your system to the application in question.

Furthermore, you can easily navigate through the menus of the controller. You do not need any training to be able to set and monitor the system.

#### Ethernet connection

CU 352 incorporates an Ethernet connection which makes it possible to get full and unlimited access to the setting and monitoring of the system via a remote PC.

#### Service port, GENI TTL

The service port of the CU 352 enables easy access to updating software and data logging in service situations.

#### External communication

Control MPC enables communication with other fieldbus protocols. In order to communicate with other fieldbus protocols, a GENIbus module and a gateway is needed.

Control MPC can communicate with LON, PROFIBUS, Modbus or BACnet via Grundfos CIM or CIU.

**Note:** For further information about Control MPC, see the "Control MPC" data booklet. The data booklet is available in Grundfos Product Center on [www.grundfos.com](http://www.grundfos.com). For further information on Grundfos Product Center, see section Grundfos Product Center.

# 11. Selection of product

## Key application data sheet

Our "Key application data sheet" can be used to gather the information typically needed in order to make the most suitable pump configuration.

Consider the following aspects when configuring a pump:

- the pumped liquid
- viscosity and density
- solids in the liquid
- operating temperatures and pressures
- customer-specific requirements.

These and other operating conditions listed in the data sheet are important for choosing the right pump material, shaft seal and shaft seal arrangement.

The data sheet can be seen as a check list and can be filled in by the customer alone or together with a Grundfos representative.

We recommend that you always fill in this data sheet as it saves a lot of time for the customer and for Grundfos.

The "Key application data sheet" can be found in Grundfos Product Center.

How to find the "Key application data sheet" in Grundfos Product Center

## Pump size

Select the pump size on the basis of these conditions:

- required flow rate and pressure at the draw-off point
- pressure loss as a result of height differences
- friction loss in the pipes. It may be necessary to account for pressure loss in connection with long pipes, bends or valves, etc.
- optimum efficiency at the estimated duty point.

## Efficiency

If you expect the pump to always operate at the same duty point, select a pump which operates at a duty point corresponding to the optimum efficiency of the pump.

In case of controlled operation or varying consumption, select a pump whose optimum efficiency falls within the duty range covering the greater part of the duty time.

## Material

Select the material variant on the basis of the liquid to be pumped. See section Pumped liquids.

### Related information

[General recommendations](#)

## Motor size

Select the motor size on the basis of the power required to achieve the duty point of the chosen pump. This information can be found in the power chart below each performance chart. See section Performance curves.

When a pump is fitted with a stuffing box, select the motor size according to ISO 5199.

Find the power curve corresponding to the required QH-value or interpolate between curves.

To select the motor size, read the value of the P2 curve at the duty point and add a 5 % safety margin.

If the motor size must be selected according to ISO 5199, see the table below.

### Safety margins according to ISO 5199

Required pump power up to [kW]	Motor power P2 [kW]
0.18	0.25
0.27	0.37
0.40	0.55
0.55	0.75
0.81	1.1
1.1	1.5
1.7	2.2

[Overview](#)

## 12. Pumped liquids

### General recommendations

We recommend NBG and NKG pumps for thin, clean and non-explosive liquids not containing solid particles or fibres.

Liquids with temperatures ranging from -25 to +140 °C are covered in this data booklet.

For liquids ranging from -40 to +220 °C, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858", or contact Grundfos.

Water in heating and ventilating systems often contains additives to prevent negative effects, such as system corrosion or calcareous deposits. In these cases, we recommend special shaft seals to avoid crystallisation/precipitation between the seal faces.

For heating systems, the water quality must meet VDI2035.

### "Liquids" in Grundfos.com

Via 'Solutions' on the Grundfos.com webpage a "liquids" module is accessible. This is based on the type and properties of the pumped liquid and gives recommendations with regard to materials for the wetted parts of the pump, i.e. recommend suitable and durable materials for pump housing, impeller, shaft, mechanical shaft seal and O-rings.

The "Liquids" module covers more than 170 widely used liquids.

Please note that other factors also affect the chemical resistance of the pump materials:

- solids
- contaminants
- pressure
- cleaning procedures.

These factors are NOT considered in this tool, and the suitability of the pump material configuration can only be proved through a test.

When selecting the shaft seal and the shaft seal arrangement, we recommend that you consult the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps" for further information.

For pumped liquids with a density and/or viscosity higher than those of water, use motors with correspondingly higher outputs.

# 15. Introduction to curves and technical data

## How to read the curve charts

TM085649

Pos.	Description
1	Total pump head, p [kPa] or H [m] = $H_{total}$
2	Impeller diameter [mm]
3	Hydraulic efficiency curves are shown as dashed lines, eta [%]
4	Pump type, pole number and frequency
5	The NPSH curve is shown for maximum impeller size.
6	The NPSH curve is shown for minimum impeller size.
7	The power curve indicates pump input power P2 [kW]
8	QH curve for the individual pump. The bold curve shows the recommended performance range.

The shown pump performance curves in section Performance curves represent the pump in combination with an IE3 motor.

- 2-pole: P2 less than or equal to 22 kW, pump with MG motor; P2 greater than or equal to 30 kW, pump with Siemens motor.
- 4-pole: P2 less than or equal to 15 kW, pump with MG motor; P2 greater than or equal to 18.5 kW, pump with Siemens motor.
- 6-pole: Pump with Siemens motor.
- 8-pole: Pump with Siemens motor.

### Related information

[Overview](#)

## Curve conditions

The guidelines below apply to the curves shown in the section Performance curves.

- Tolerances are according to ISO 9906:2012 Grade 3B.
- The curves show pump performance with different impeller diameters at the nominal speed.
- The bold part of the curves show the recommended operating range.
- We do not recommend the thin parts as the possible operating range here might suggest the selection of a smaller or larger pump type.
- Do not use the pumps at minimum flow rates below  $0.1 \times Q_{max}$  because of the danger of overheating the pump.
- The curves apply to the pumping of water at a temperature of 20 °C and a kinematic viscosity of 1 mm<sup>2</sup>/s (1 cSt).
- **Eta:** The dashed lines show values of the hydraulic efficiency of the pump.
- **NPSH:** The curves show maximum values measured under the same conditions as the performance curves.
- In case of other densities than 1000 kg/m<sup>3</sup>, the outlet pressure is proportional to the density.
- When pumping liquids with a density higher than 1000 kg/m<sup>3</sup>, motors with correspondingly higher outputs must be used.
- When a pump is fitted with a stuffing box, select the motor size according to ISO 5199.

### Calculation of total head

The total pump head consists of the height difference between the measuring points + the differential head + the dynamic head.

$$H_{total} = H_{geo} + H_{stat} + H_{dyn}$$

$H_{geo}$	Height difference between measuring points.
$H_{stat}$	Differential head between the inlet and outlet sides of the pump.
$H_{dyn}$	Calculated values based on the velocity of the pumped liquid on the inlet and outlet sides of the pump.

## Pump performance testing

NB, NBG, NK and NKG testers are all capable of performing hydraulic performance tests according to ISO 9906:2012 requirements.

The standard ISO 9906:2012 sets standards for "rotodynamic pumps, Hydraulic performance acceptance tests, Grades 1, 2 and 3".

### Performance acceptance grades

Six pump-performance-test acceptance grades, 3B, 2B, 2U, 1B, 1E and 1U are defined in ISO 9906:2012.

Acceptance grade	Mandatory measurements		Optional measurements	
	Q	H	P1	Eta-tot
3B	± 9 %	± 7 %	+ 9 %	- 7 %
2B	± 8 %	± 5 %	+ 8 %	- 5 %
2U	+ 16 %	+ 10 %	+ 16 %	
1B	± 5 %	± 3 %	+ 4 %	- 3 %
1E	± 5 %	± 3 %	+ 4 %	≥ 0 %
1U	+ 10 %	+ 6 %	+ 10 %	

Q:	Flow
H:	Head
P1:	Total consumed power
Eta-tot:	Total efficiency

These tolerance grades can be used in the contract between the pump manufacturer and the purchaser, or they can be used in a default tolerance factor which will apply if no specific tolerance grade has been agreed between the manufacturer and the customer.

The performance acceptance grades are explained in section Specifying acceptance grades, showing the performance grades related to an ordinary pump curve.

### Related information

[Specifying acceptance grades](#)

[Acceptance grades and tolerances](#)

## The guarantee point

According to ISO 9906:2012 the acceptance-grade tolerance applies to one guarantee point.

A guarantee point is defined by a guaranteed flow and a guaranteed head.

In addition either minimum total efficiency or maximum total input power may be guaranteed at the specified conditions.

This means that the standard sets guidelines for a duty point guaranteed for the following:

- Q and H - or
- Q, H and total efficiency (Eta-total) - or
- Q, H and total consumed power (P1).

The guarantee point is defined by a minimum of five measured test points.

Example on a duty point test living up to ISO 9906:2012 requirements

Five measured test points are used to verify one guarantee point

### Evaluation of performance

The test must show that the measured pump curve touches or passes through a tolerance surrounding the guarantee point, as defined by the selected acceptance grade.

Guarantee-point evaluation must be made at the rated speed, which for NB, NBG, NK, NKG pumps means 50 Hz or 60 Hz.

Pump curves that either pass or fail to cross the tolerance cross of the guarantee point

Pos.	Description
H	Head
H-g	H-guaranteed
Q-g	Q-guaranteed
F	Flow
P	Pass
F	Fail

## Performance-test types for end-suction pumps

Two types of performance tests are available for NBG, NBGE, NKG, NKGE pumps:

- duty-point-verification test
- curve test.

### Tests carried out on pumps

- Tests are saved for at least five years and can be traced using the pump's unique serial number.
- It is not possible to change acceptance grade on an already tested and supplied pump - if this should be required a re-test of the pump is needed.
- Witness testing can be arranged.

### Duty-point-verification test, Grades 3B, 2B, 2U, 1B, 1E and 1U

This test method offers the possibility to perform a duty-point verification of the following:

- Q and H - or
- Q, H and total efficiency (Eta-tot) - or
- Q, H and total consumed power (P1).

Acceptance grade	Mandatory measurements		Optional measurements	
	Q	H	P1	Eta-tot
3B	Standard		On request	
2B	On request		On request	
2U	On request		On request	
1B	On request		On request	
1E	On request		On request	
1U	On request		On request	

What Grundfos is able to guarantee for the different acceptance grades will be evaluated case by case. Contact your local sales company on this.

Grundfos makes duty-point verification according to ISO 9906:2012 for one guarantee point at full speed, 50 or 60 Hz. The customer must tell Grundfos which duty point to verify.

The requested duty point is verified by five measured points.

### Grade 1U duty-point verification

The following example illustrates performance testing according to Grade 1U.

Flow and head are mandatory and efficiency or power consumption, P1, is optional.

Tolerances for a Grade 1U test are as follows:

- Flow: + 10 %
- Head: + 6 %
- Efficiency: 0 %, only equal to or better than the guaranteed value
- P1: + 10 %

1. Q, H and Eta-tot is tested and verified

Measured values for flow and head

Measured values for total efficiency

2. Q, H and P1 is tested and verified

Measured values for flow and head

Measured values for consumed power

Note that other points than the guarantee point can be measured and displayed in a curve-test report according to Grade 3B tolerances.

### Curve test, Grade 3B

This test method is developed by Grundfos and is based on ISO 9906:2012 performance acceptance grade 3B tolerances:  $Q = \pm 9\%$ ,  $H = \pm 7\%$ .

Q-H curve with tolerance crosses on complete performance range

Pos.	Description
L	Lower limit
U	Upper limit
St	Standard curve

On figure above tolerance crosses according to Grade 3B have been distributed across the complete performance range of a pump. We generate the upper and lower limit of the performance curve by drawing two curves at the outlines of these crosses.

When the pump is tested and the measured point is located within the range between upper and lower limit, it is qualified to ISO 9906:2012 Grade 3B tolerances. This way of qualifying the pump performance is stricter than a duty-point-verification test for Grade 3B.

### How does Grundfos make curve testing for pumps

Grundfos makes the curve test in one of the following two ways:

- a reference-curve test
- a performance-curve test.

TM071542

TM071543

TM071542

TM071545

TM071515

### Reference-curve test, Grade 3B

A reference test is made when no curve-test report is specified with the order. Three or four test points are measured depending on production site, and no curve-test report is supplied with the pump.

Measurements are made to maintain and observe continuous quality and to ensure that the supplied pump is within test-grade tolerances. Test-grade tolerances are set as for Grade 3B but without certification.

#### Example of a reference-curve test

TM070445

#### Measured values for tested pump

TM070444

The values in fig. Measured values for tested pump calculated to a reference speed for comparison to a reference performance curve

If a pump-performance report is requested at a later stage only reference-test data are available.

### Performance-curve test, Grade 3B

A performance-curve test is made when a curve test report is specified with the order.

The pump is tested at pre-specified flows, distributed over the full pump curve - minimum five points, and test grade tolerances are set as for Grade 3B but without certification.

#### Example of a performance curve test

TM070447

#### Measured values for tested pump

TM070446

The values in fig. Measured values for tested pump calculated to a reference speed for comparison to a reference performance

If the customer requires more points on the curve to be checked, individual measurements must be made and this is not part of the performance curve test.

### Static high pressure test

All produced pumps undergo a static high pressure test of 1.5 x PN (pressure rating of the pump).

## Specifying acceptance grades

The graphs in section Acceptance grades and tolerances show the tolerances as stated in the standard, related to an ordinary pump curve. The graphs also show which pump performance to expect if the customer, having the same pump to start with, orders a pump with the same guarantee point for different tolerances (B, E or U) within the acceptance grades.

In some cases it will not be possible to fulfil the same guarantee point for a unilateral tolerance as it will for a bilateral tolerance. This is indicated by the lowered curve for "E" and "U" grades.

If the requested guarantee point is the same for a Grade U pump as for a Grade B pump, the consequence of the production tolerances could result in a larger pump being required to obtain the requested duty point.

What Grundfos is able to guarantee for the different acceptance grades will be evaluated case by case. Contact your local sales company on this.

## Acceptance grades and tolerances

### Acceptance grade B

This acceptance grade refers to grades with a bilateral tolerance on flow and head and with a tolerance on efficiency.

### Acceptance grade E

This acceptance grade refers to a grade with a bilateral tolerance on flow and head but without tolerance on efficiency.

### Acceptance grade U

This acceptance grade refers to a grade with a unilateral tolerance on flow and head. For the 2U grade there is a tolerance on efficiency. For the 1U grade there is no tolerance on efficiency.

Note that if the acceptance grade changes from Grade 1B to 1U, the customer does not necessarily get a better pump with a higher efficiency. More likely, he gets a pump where the performance is always to the positive side of the guarantee point.

## NBG dimensions

Standard motors in this table are IE3 motors:

- 2-pole: P2 less than or equal to 22 kW, pump with MG motor; P2 greater than or equal to 30 kW, pump with Siemens motor.
- 4-pole: P2 less than or equal to 15 kW, pump with MG motor; P2 greater than or equal to 18.5 kW, pump with Siemens motor.
- 6-pole: Pump with Siemens motor.
- 8-pole: Pump with Siemens motor.

E-motors in this table:

- 2-pole: P2 less than or equal to 22 kW, pump with MGE motor.
- 4-pole: P2 less than or equal to 22 kW, pump with MGE motor.

Note: NBG 350-300-305 is available with PN 10 pump flanges, the PN 10 flange dimensions of Ss is 16x23, Sd is 12x23.

39) Pump with standard motor / pump with E-motor.

40) S1 is the size of bolt thread for mounting.

41) X: Service dimension.

42) For stainless steel and duplex steel versions, s1 is M24.

**NKG, dimensional drawings**

TM034051

*C-channel base frame, center outlet*

TM046113

*C-channel base frame, tangential outlet*

TM034179

EN/ISO base frame, center outlet

TM036005

EN/ISO base frame, tangential outlet

<sup>1</sup> X: Service dimension. This dimension can be found in section NKG bare-shaft pumps, it equals to the length of the spacer coupling.

## NKG dimensions

Standard motors in this table are IE3 motors:

- 2-pole: P2 less than or equal to 22 kW, pump with MG motor; P2 greater than or equal to 30 kW, pump with Siemens motor.
- 4-pole: P2 less than or equal to 15 kW, pump with MG motor; P2 greater than or equal to 18.5 kW, pump with Siemens motor.
- 6-pole: Pump with Siemens motor.

E-motors in this table:

- 2-pole: P2 less than or equal to 22 kW, pump with MGE motor.
- 4-pole: P2 less than or equal to 18.5 kW, pump with MGE motor.

This model is only available as bare shaft pump.

Note: NKG 350-300-305 is available with PN 10 pump flanges, the PN 10 flange dimensions of Ss is 16x23, Sd is 12x23.

<sup>43)</sup> EN/ISO base frame, see section NKG with EN/ISO base frames, dimensional sketches, C-channel base frame, see section NKG with C-channel base frames, dimensional sketches.

<sup>44)</sup> Pump with standard motor / pump with E-motor.

<sup>45)</sup> Pump with standard coupling / pump with spacer coupling.

<sup>46)</sup> Pump with Siemens motor with integrated CUE, see section NKGE (Siemens motor with integrated CUE), dimensional drawings.

### NKGE (Siemens motor with integrated CUE), dimensional drawings

TM080774

EN/ISO base frame with 4 mounting holes

TM080775

EN/ISO base frame with 6 mounting holes

TM082363

EN/ISO base frame with 6 mounting holes, tangential outlet

## NKGE (Siemens IE4 motor with integrated CUE) dimensions, in mm

NKGE with Nidec IE5 motor has slight different dimensions and need to refer to GPC *NKGE* for details.

## 18. Minimum efficiency index

Minimum efficiency index (MEI) means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to MEI greater than or equal to 0.10 as from 1 January 2013 and MEI greater than or equal to 0.40 as from 1 January 2015. An indicative benchmark for best-performing water pump available on the market as from 1 January 2013 is determined in the Regulation.

- The benchmark for most efficient water pumps is MEI greater than or equal to 0.70.
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller adapts the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.
- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example by using a variable-speed drive that matches the pump duty to the system.

Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

48) Pump with standard coupling / pump with spacer coupling.

49) For pump dimensions with E-motors, see the relevant parts in section Dimensional drawings and technical data.

50) P2 less than or equal to 22 kW, pump with MG motor; P2 greater than or equal to 30 kW, pump with Siemens motor.

<sup>51)</sup> Pump with standard coupling / pump with spacer coupling.

<sup>52)</sup> For pump dimensions with E-motors, see the relevant parts in section Dimensional drawings and technical data.

<sup>53)</sup> P2 less than or equal to 15 kW, pump with MG motor; P2 greater than or equal to 18.5 kW, pump with Siemens motor.

54) Pump with standard coupling or pump with spacer coupling.

55) For pump dimensions with E-motors, see the relevant parts in section Dimensional drawings and technical data.

56) Pump with Siemens motor.

**Related information**

*NKG, dimensional drawings*

**NBG base frames**

Some NBG pumps are available with base frame as an option. The pump is mounted on the base frame when produced, and therefore the base frame should be ordered together with the pump.

TM051514

NBG pump with base frame

**NBG base frames, dimensional sketches**

Base frame code	Dimensions [mm]	
10K		TM049284
10L		TM049285
10M		TM049286

**NB pump dimensions as per motor type**  
**NBG, 2-pole**

For information about pump dimensions and weight, see Grundfos Product Center.

## NBG base frames, product numbers

When you order a separate base frame, you will receive the components needed for mounting the pump on the base frame such as:

- base frame
- eye bolts for lifting
- support blocks or support rail
- instructions
- nuts and bolts for securing the pump on the base frame.

## Siemens, 8-pole

The electrical data is available on request.

## Electrical data, MGE motors

Electrical data for motors with built-in frequency converter.

### Medium speed, 4000 RPM

Motor	Frame size	Voltage	P2 [kW]	I <sub>1/1</sub> [A]
MGE	80B-IA	3 × 380-480 V	1.1	2.2 - 1.9
MGE	90SC-IA		1.5	2.9 - 2.4
MGE	90LD-IA		2.2	4.15 - 3.4
MGE	100LA-JA		3	5.8 - 4.8
MGE	112MC-JA		4	7.6 - 6.2
MGE	132SE-JA		5.5	10.3 - 8.2
MGE	132SF-JA		7.5	14.1 - 11.2
MGE	160MH-JA		11	20.3 - 16.0
MGE	160MA-K		15	26.7 - 22.0
MGE	160LB-K		18.5	33.0 - 27.8
MGE	180MC-K		22	39.2 - 31.5

### Low speed, 2000/2200 RPM

Motor	Frame size	Voltage	P2 [kW]	I <sub>1/1</sub> [A]
MGE	80B-IA	3 × 380-480 V	0.55	1.2 - 1.1
MGE	80C-IA		0.75	1.55 - 1.4
MGE	90SD-IA		1.1	2.2 - 1.9
MGE	90LD-IA		1.5	2.9 - 2.5
MGE	100LB-JA		2.2	4.3 - 3.6
MGE	100LD-JA		3	5.8 - 4.6
MGE	112ME-JA		4	7.7 - 6.0
MGE	132SG-JA		5.5	10.5 - 8.40
MGE	132MH-JA		7.5	14.1 - 11.1
MGE	160MD-K		11	20.2 - 16.4
MGE	160LE-K		15	26.7 - 21.8
MGE	180MF-K		18.5	33.2 - 26.9
MGE	180LG-K		22	39.2 - 31.5

## Pump dimensions with other motors

The tables below show changes of pump dimensions when using other motors than the standard motors listed in section Dimensional drawings and dimensions.

IE class	Motor
IE3/IE4	Siemens

### Example

If a 2-pole, 3 kW Siemens motor, class IE3, is selected, the LL dimension will be 9 mm bigger.

## IE3

## IE3, Siemens, 2-pole

P2 [kW]		Motors on data pages		Other motors		L/LB	H	h4/AD	AG	LL	P	A	B	C	K	Weight [kg]

**Note:** The dimensions L and h4 refer to NKG pumps, LB and AD to NBG pumps.

## 21. Vortex impeller range

### Super Vortex impellers in NBG, NKG pumps

TM084380

This section describes technical details on where the NBG, NKG pump with Super Vortex impeller differs from the standard NBG, NKG pump with a closed impeller. Other technical details which are not mentioned in this section are shared with those for the NBG, NKG with a closed impeller.

### Applications

#### Introduction

The NBG/NKG Super Vortex impeller pump is designed for dry installation with the purpose to minimize the risk of blocking when handling wastewater, process water and swarf and thereby covers most applications containing dirty liquids.

The Super Vortex impeller provides passage for long fibres and solids up to 25 mm and is suitable for wastewater with a dry matter content of up to 5 %.

The Super Vortex design is suitable for these application types:

- washing and cleaning in Automotive and Food & Beverage industry (F&B)
- machining in Automotive and Metal industry
- processing in oils and fat application in F&B
- textile industry

- wastewater treatment in Textile, Automotive, Pulp & Paper
- industrial water reuse.

#### ATEX

The NKG pumps with SuperVortex impeller is suited for ATEX (Ex) applications when combined with either Grundfos Back to Back Double seal, or Burgman Cartex double seal solution.

The pump must be installed with the shaft seal arrangement containing pressurized barrier fluid to enable the protection of the shaft seal from getting in contact with hazards from the pumped liquid.

The NBG pumps with SuperVortex impeller is **not** suited for ATEX (Ex) applications.

#### Features and benefits

NBG and NKG pumps with Super Vortex impellers offer the following features and benefits:

- The pumps are non-self-priming, single-stage, centrifugal volute pumps with axial inlet port, radial outlet port and horizontal shaft.
- Design is according to ISO 5199.
- Inlet and outlet flanges are according to EN 1092-2.
- Dimensions are according to ISO 2858 (16 bar).
- PN 16 (16 bar) & PN 25 (25 bar) range available in 1.4408 and 1.4517 execution.
- The mechanical shaft seal has dimensions according to EN 12756.
- The pumps offer flow rates from 2 to 250 m<sup>3</sup>/h and heads from 2 to 60 m.
- The pumps can be equipped with an MGE motor with integrated frequency converter or connected to a Grundfos CUE external frequency converter.
- All pumps are statically balanced according to ISO 1940-1 class 6.3.
- Impellers are hydraulically balanced.

# NBG/NKG Super vortex, Performance range

## NBG/NKG, 2-pole

TM11040584

## NBG/NKG, 4-pole

TM11040585

## Product range

The tables on the following pages show the complete product ranges of NBG/E and NKG/E pumps with Super Vortex impellers. The standard range has been combined on the basis of the following parameters:

### Pump

- Pump housings have outlet flanges from DN 65 to DN 100.
- Cast iron pumps have fixed flanges.
- Stainless 1.4408 & Duplex Stainless 1.4517 pumps have loose flanges.

### Standard Grundfos motor

- Motors are for 50Hz.
- NBG and NKG pumps are available with IE3, 2- and 4-pole motors as standard.
- Motor with power rating up to and including 4 kW are available for "low voltage" execution; motors from 2.2 kW are available for "high voltage".
- All pumps with standard motor can be connected to an external frequency converter either Grundfos CUE or other external drives.

### Grundfos MGE motor

- NBGE and NKGE pumps are available with Grundfos IE5 MGE motor with integrated frequency converter.
- MGE motors are available in 3 speed versions:
  - Low speed up to 2000 RPM (0.55 - 1.5 kW)
  - Low speed up to 2200 RPM (2.2 - 22 kW)
  - Medium speed up to 4000 RPM (1.1 - 22 kW)

## Maximum particle size

Depending on pump model the Vortex impeller pumps can handle different maximum sizes of particles.

Model	d5	Trim	Particle size diameter
100-80-125	24	144	20
80-65-160	24	158; 171	20
80-50-200	24	183; 199; 215	20
100-65-200	32	183; 199	20
100-80-160	32	158; 171	20
125-100-160	32	144; 158; 171	20
125-100-200	32	183; 199; 215	25
125-100-250	42	230; 255; 267; 275	25

## 22. Accessories

### Counter-flange

#### Cast iron pumps

Counter-flanges for cast iron NBG, NBGE and NKG, NKGE pumps are made of steel.

A set consists of one counter-flange, one gasket of asbestos-free material and the requisite number of bolts and nuts.

Counter-flange	Flange size	Description	Rated pressure [bar] EN 1092-2	Pipe connection	Product number
	DN 32	Threaded	10/16	Rp 1 1/4	419901

**Note:** All sensors have 4-20 mA output signal.

## Potentiometer

TM021630

Potentiometer for setpoint setting and start/stop of the pump.

Product	Product number
External potentiometer with cabinet for wall mounting	625468

## Grundfos GO

Grundfos GO is used for wireless infrared or radio communication with the pumps.

### MI 301

MI 301 is a module with built-in infrared and radio communication. Use MI 301 in conjunction with an Android or iOS-based smart devices with a Bluetooth connection. MI 301 has a rechargeable Li-ion battery and you must charge it separately.

TM053890

MI 301

Supplied with the product:

- Grundfos MI 301
- sleeve
- battery charger
- quick guide.

## Product numbers

Grundfos GO variant	Product number
Grundfos MI 301	98046408

## Supported units

Make	Model	Operating system	MI 301
Apple	iPod touch 4G	iOS 5.0 or later	•
	iPhone 4, 4S		•
	iPod touch 5G	iOS 6.0 or later	•
	iPhone 5		•
HTC	Desire S	Android 2.3.3 or later	•
	Sensation	Android 2.3.4 or later	•
Samsung	Galaxy S II		•
	Galaxy Nexus	Android 4.0 or later	•
LG	Google Nexus 4	Android 4.2 or later	•

**Note:** Similar Android and iOS-based devices may work as well, but are not supported by Grundfos.

## CIU communication interface units

TM1040612

### Grundfos CIU communication interface unit

The CIU units enable communication of operating data, such as measured values and setpoints, between E-pumps and a building management system. The CIU unit incorporates a 24-240 VAC/VDC power supply module and a CIM module. It can either be mounted on a DIN rail or on a wall.

We offer the following CIU units:

Description	Fieldbus protocol	Product number
CIU 100	LONWorks for pumps	96753735
CIU 150	PROFIBUS DP	96753081
CIU 200	Modbus RTU	96753082
CIU 250 <sup>70)</sup>	GSM	96787106
CIU 270 <sup>70)</sup>	GRM	96898819
CIU 300	BACnet MS/TP	96893769
CIU 500	Ethernet, BACnet IP	
CIU 500	Ethernet, Modbus TCP	
CIU 500	Ethernet, PROFINET IO	96753894
CIU 500	Ethernet, GRM IP	
CIU 500	Ethernet, EtherNet/IP	
CIU 900	CIU box without CIM	99448387
CIU 901	CIU box with IO 270 only	99448389

<sup>70)</sup> Antenna not included. See section Antennas and battery.

For further information about data communication via CIU units and fieldbus protocols, see the CIU documentation available in Grundfos Product Center.

## CIM communication interface modules

TM1040613

### Grundfos CIM communication interface module

The CIM modules enable communication of operating data, such as measured values and setpoints, between E-pumps of up to 22 kW and a building management system. The CIM modules are add-on communication modules which are installed in the MGE terminal box.

**Note:** CIM modules must be installed by authorised personnel.

We offer the following CIM modules:

Product	Description	Product number
CIM 100	LONWorks for pumps	96824797
CIM 110	LONWorks for multipump	96824798
CIM 150	PROFIBUS DP	96824793
CIM 200	Modbus RTU	96824796
CIM 250 <sup>71)</sup>	GSM	96824795
CIM 260-EU <sup>71)</sup>	3G/4G cellular	99439302
CIM 260-US <sup>71)</sup>	3G/4G cellular	99439306
CIM 270 <sup>71)</sup>	GRM	96898815
CIM 280-EU <sup>71)</sup>	GiC/GRM 3G/4G	99439724
CIM 280-US <sup>71)</sup>	GiC/GRM 3G/4G	99439725
CIM 300	BACnet MS/TP	96893770
CIM 500	Ethernet, BACnet IP	
CIM 500	Ethernet, Modbus TCP	
CIM 500	Ethernet, PROFINET IO	98301408
CIM 500	Ethernet, GRM IP	
CIM 500	Ethernet, EtherNet/IP	

<sup>71)</sup> Antenna not included. See section Antennas and battery.

For further information about data communication via CIM modules and fieldbus protocols, see the CIM documentation available in Grundfos Product Center.

## EMC filter

### EMC (electromagnetic compatibility to EN 61800-3)

Motor [kW]		Emission/immunity
2-pole	4-pole	
0.37	0.37	Emission Motors may be installed in residential areas (first environment), unrestricted distribution, corresponding to CISPR11, group 1, class B.
0.55	0.55	
0.75	0.75	
1.1	1.1	
1.5	1.5	
2.2	2.2	Immunity
3.0	3.0	Motors fulfil the requirements for both the first and second environment.
4.0	4.0	
5.5	-	Emission
7.5	-	
-	5.5	The motors are category C3, corresponding to CISPR11, group 2, class A, and may be installed in industrial areas (second environment).
-	7.5	
11	11	If equipped with an external Grundfos EMC filter, the motors are category C2, corresponding to CISPR11, group 1, class A, and may be installed in residential areas (first environment).
15	15	
18.5	18.5	
22	-	

TM029198

### EMC filter

The EMC filter for residential areas is available as a complete kit ready for installation.

Product	Product number
EMC filter (5.5 kW and 7.5 kW, 4-pole)	96041047
EMC filter (11-22 kW)	96478309

## Shims

TM043264

### Shim

Shims to adjust motor height when aligning pump and motor.

Product	Product number
Small case (180 pcs)	96659156
Large case (360 pcs)	96659157

Each case contains three types of shims:

**Type 1:** 55 x 50 mm (2.17 x 1.97 in), 15 mm (0.59 in) slot.

**Type 2:** 75 x 70 mm (2.95 x 2.76 in), 23 mm (0.91 in) slot.

**Type 3:** 90 x 80 mm (3.54 x 3.15 in), 32 mm (1.26 in) slot.

Each type has ten of each of three sizes: 0.02; 0.028; 0.039 inch (0.5; 0.7; 1 mm).

A large case contains 20 of each of the above-mentioned shims. Refills can be found via service.

## Support blocks

Steel support blocks are used to compensate for dimensional differences between pump housing and motor frame sizes. The support blocks can be fitted under the motor or pump housing feet during installation thus enabling horizontal alignment of the pump.

Support blocks	
No	Position
1a	
1b	
2a	
2b	
3	

## Key to support block number

No	Description
1a	Support blocks to be fitted under motor feet
1b	
2a	Support blocks to be fitted under pump housing feet
2b	
3	Support blocks to be fitted under both motor and pump housing feet

## Base frames

As an additional feature a base frame for improving the installation is available. The base frame is placed between the foundation and the support blocks.

When ordering a base frame as an accessory, the relevant support blocks, bolts, nuts and washers for mounting of the pump on the base frame are always included. Bolts for mounting the base frame on the foundation are not included.

## Product numbers

Information on the pump nameplate will indicate which support block number to choose.

The product numbers in the tables on the following pages refer to one support block. Therefore always order two of the product numbers in the list as the pump/motor needs to be supported on both sides.

**Note:** Bolts, washers and nuts are not supplied together with support blocks.

If the pump housing of your pump has feet and two options are indicated, choose the one with support blocks for the pump.

If your pump/motor combination is not in the list, contact your Grundfos Customer Service Unit (CSU).

**NBG, 2-pole, 50 Hz**

72) Always order two of the product numbers in the list as the pump/motor needs to be supported on both sides.

**NBG, 4-pole, 50 Hz**

75) Always order two of the product numbers in the list as the pump/motor needs to be supported on both sides.

## Certificates and reports

Grundfos offers a number of certificates and reports.

When a customer wants a certificate or a report, the request must be stated on the order.

The certificate or report will then be put onto the bill of materials and thus included in the product number of the pump.

Certificates or reports have to be confirmed for every order.

For more information on certificates and reports, see the data booklet "NB, NBG, NK, NKG, NBE, NBGE, NKE, NKGE - Custom-built pumps according to EN 733 and ISO 2858".

Short description	Standard
<b>Certificate of compliance with the order</b>	EN 10204 - 2.1
Grundfos document certifying that the pump supplied is in compliance with the order specifications.	
<b>Test certificate - Non-specific inspection and testing</b>	EN 10204 - 2.2
Certificate with inspection and test results of a non-specific pump	
<b>Inspection certificate - Grundfos authorized department</b>	EN 10204 - 3.1
Grundfos document certifying that the pump supplied is in compliance with the order specifications. Inspection and test results are mentioned in the certificate.	
<b>Inspection certificate - External classifying society</b>	EN 10204 - 3.2
Grundfos document certifying that the pump supplied is in compliance with the order specifications. Inspection and test results are mentioned in the certificate. Certificate from the surveyor is included:	
Lloyds Register EMEA (LR )	3.2
Inspection certificate DNV-GL	3.2
Bureau Veritas (BV)	3.2
American Bureau of Shipping (ABS)	3.2
Registro Italiano Navale Agenture (RINA)	3.2
China Class. Society (CCS)	3.2
Russian Maritime Register (RS)	3.2
Biro Klas. Indonesia (BKI)	3.2
United States Coast Guard (USCG)	3.2
Nippon Kaiji Koykai (NKK)	3.2
<b>Pump performance - Curve test report</b>	ISO 9906:2012
Performance curve test report - Grade 3B	
<b>Pump performance - Duty point verification report</b>	ISO 9906:2012
Duty point verification report - Grade 3B, Q&H	
Duty point verification report - Grade 3B, Q&H + Eta total	
Duty point verification report - Grade 3B, Q&H + P1	
Duty point verification report - Grade 2B, Q&H	
Duty point verification report - Grade 2B, Q&H + Eta total	
Duty point verification report - Grade 2B, Q&H + P1	
Duty point verification report - Grade 2U, Q&H	
Duty point verification report - Grade 2U, Q&H + Eta total	
Duty point verification report - Grade 2U, Q&H + P1	
Duty point verification report - Grade 1B, Q&H	
Duty point verification report - Grade 1B, Q&H + Eta total	
Duty point verification report - Grade 1B, Q&H + P1	
Duty point verification report - Grade 1E, Q&H	
Duty point verification report - Grade 1E, Q&H + Eta total	
Duty point verification report - Grade 1E, Q&H + P1	
Duty point verification report - Grade 1U, Q&H	
Duty point verification report - Grade 1U, Q&H + Eta total	
Duty point verification report - Grade 1U, Q&H + P1	
<b>Other certificates/Reports</b>	
Material specification report	
Material specification report + certificate from raw material supplier	
ATEX approved pump report	
PWIS-free certificate	
Vibration report	ISO 5199
Vibration report	ISO 10816
Impeller balancing report Grade 6.3	ISO 1940

## 23. Service

Some pump parts will become worn over time and need to be replaced. These parts can be ordered as service kits.

### **Service recommendations**

To avoid unnecessary downtime, we recommend that you stock certain service parts. These service parts should be ordered together with the pump.

Information about service kits and recommended service parts can be found in the service kit catalogue.

In Grundfos Product Center, you can also search for the "Service offerings" data booklet, which gives relevant information about service issues.

## 24. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

From the international view, you can select your specific country to view the product range available to you.

International view: <https://product-selection.grundfos.com>

### All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

### Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc., in PDF format.

When you select your country, you will see the menus below. Note that some menus may not be available depending on the country.

Example: <https://product-selection.grundfos.com/uk>

Pos.	Description
1	<b>Products &amp; services</b> enables you to find products and documents by typing a product number or name into the search field.
2	<b>Applications</b> enables you to choose an application to see how Grundfos can help you design and optimise your system.
3	<b>Products A-Z</b> enables you to look through a list of all the Grundfos products.
4	<b>Categories</b> enables you to look for a product category.
5	<b>Liquids</b> enables you to find pumps designed for aggressive, flammable or other special liquids.
6	<b>Product replacement</b> enables you to find a suitable replacement.
7	<b>WWW</b> enables you to select the country, which changes the language, the available product range and the structure of the website.
8	<b>Sizing</b> enables you to size a product based on your application and operating conditions.

Appendix A

A.1. Flange forces and torques

TM045621

Flange forces and torques

2) ΣF and ΣM are vector sums of the forces and torques

If not all loads reach the maximum permissible value, one of the values is allowed to exceed the normal limit. Contact Grundfos for further information.
