

NEMO® BY Pumps

NETZSCH

**Broad spectrum of products
and applications**

NEMO® BY Progressing Cavity Pumps can be used in any area of industry where a great variety of different substances must be pumped or very precisely dosed. From low viscosity media to products barely capable of flowing, with or without solid content, shear-sensitive, sticky or abrasive – with the NEMO® BY, even difficult substances are conveyed gently and under low pulsation.

In block construction with a flanged drive, this NEMO® pump is particularly compact and economical. The NEMO® BY also differentiates itself by means of low investment, operating and maintenance costs. Four rotor/stator geometries are available to cover a broad spectrum of products and applications.

NEMO® BY Pump Features

- Continuous low-pulsation conveyance unaffected by fluctuations in pressure and viscosity
- Conveyance volume in proportion to rotation speed with high dosing precision over the entire rotational-speed range
- High pressure capability without valves
- Location of the mechanical seal directly under the intake port in the pumping space makes external flushing of the seal unnecessary in many applications
- Short drive shaft and pump lantern offer high stability for mechanical seal installation
- Separate flange bearing and pump base make it easy to change the stator
- Variable modular system
- Various rotor/stator geometries and a Wide spectrum of materials
- Robust and compact block construction
- Four different joints are available: pin joints, gear joints, V-joints, and pivot joints
- Standard mechanical seal, other seals optional
- Low noise, low vibration
- High suction capability up to 9 mWC
- Bi-directional
- Vertical or horizontal installation
- Temperatures from -40°C to 300°C

wastewater, activated sludge, plaster and cement mortar, acids, lime water, emulsion paints, soaps, adhesives, etc.

Your Benefits

- Gentle conveyance
- Easy to clean and service
- Low mean time between repairs
- Low noise, low vibration
- Economical operation and routine maintenance requirements only

Applications

- Shear sensitive products
- Low to high viscosity
- Sticky and smooth
- With or without solids
- Dilatant and / or thixotropic
- Abrasive
- Adhesive

* Based on largest standard gearmotor. C-Face motor arrangement may be longer.
Not for construction.

Options for bearing block pumps

- Assortment of shaft sealing systems planned in accordance with API 682; seal sizes in accordance with API 610
- Systems for monitoring conveying pressure
- Dry running protection units
- Safety valves
- Electrical control systems
- Bypass lines
- Application-specific baseplates
- Wide variety of drive systems
