Performance of Straight Centrifugal Pedestal Pumps

AMT Straight Centrifugal Pedestal pumps are designed for continuous duty OEM, Industrial/ Commercial and processing applications including: circulation, chemical processing, liquid transfer, heating and cooling. The high head models are ideal for sprinkler systems and pressure boosting. Pumps are designed to handle liquids with solids contents or dissolved solids and debris up to $7 \%$ of liquid volume.

These units are available in a variety of construction and seal materials. Pull-from-the-rear design permits easy servicing without disturbing any piping. Pedestals feature CNC machined shafts with sealed ball bearings.
