

Economical, safe and efficient

Check valves Type 561 and Type 562

Benefits

Reliable, efficient, durable – for your benefit, for your profit

The check valve types 561 and 562 are a new generation of valves, featuring more safety, simplicity and efficiency. They represent a milestone in valve technology and exemplify an outstanding engineering achievement, which combines what the market wants with what is technologically feasible. The focus is on efficiency, user friendliness and compatibility. The two check valves type 561 and type 562 easily fit in all piping systems worldwide thanks to our comprehensive product range.

Safety

The new check valve type 562 (horizontal) closes absolutely leak-tight with the built-in spring, even in the de-energized state – without water column as well as in a horizontal position. The spring in standard versions is made of stainless steel (SS304). A higher quality steel or plastic-coated steel spring is also available. The risk of corrosion is minimal. If no spring is desired, we recommend using the check valve type 561 (vertical), which is 100 percent leak-proof, at a water column of two meters.

Simplicity

The self-closing mechanism operates autonomously, without any other energy source, i.e. water column or flow (type 562) or with a minimal line pressure (type 561). The wide range of connecting possibilities in all conventional standards and versions from GF Piping Systems guarantees easy integration of the valves in all piping systems.

Efficiency

The new streamlined check cone and the refined geometry in every detail provide for a significantly improved flow compared to valves with a check ball, without compromising functionality or leak-tightness. The effort involved in cleaning and servicing the valve has been reduced to a minimum thanks to the cone design, which offers the least possible contamination surface.

Features

Spirit of innovation and customer needs united in an optimal way – check valves from GF Piping Systems

Our engineers focused primarily on two areas in the development of the new check valve: How can we make an established product type even more reliable? And how can we reduce the wear and tear on moving parts and consequently keep maintenance to a minimum? The solution was to completely redesign the inner workings of the valve. GF Piping Systems examined every function and optimized every detail to achieve a dramatically improved valve performance.

Systemdetails

The flow-optimized check cones provide improved maintenance and reliability

The unique check cone element design is at the heart of the new valve generation. A further benefit: The optimized flow geometry minimizes flow resistance and pressure loss. This allows saving valuable energy. Thanks to the new sealing zone and the specially developed profile seal, the valve is absolutely leak-proof, even with very fast closing and improved maintenance and reliability.

100 percent leak-proof

Two special design factors make sure the valve closes tightly. The check cone has the contour of a spherical surface in the sealing zone. Also, the double bearing of the cone prevents it from tilting, even with rapid closing. Malfunctions are therefore eliminated.

Optimized flow contour

An optimal flow contour with smooth transitions and radii enables a higher flow rate than conventional check valves. The benefits are obvious: less wear and tear, less pressure loss and better maintenance cycles.

Any installation position is possible thanks to the spring

The 562 check valve is equipped with a spring mechanism and closes tightly even without a water column. Thanks to this new design feature, the valve can be built in either vertically or horizontally.

Dimensioning and materials

The dimension range of the valves from DN10–DN100 takes the continually increasing volumes conveyed in industrial piping systems into account. Similarly, the diversity of materials covers all industrial applications: PVC-U, PVC-C, ABS, PP-H and PVDF.

Easy maintenance

The valve can be easily dismantled and removed in just a few steps. This saves time and effort during maintenance work or when retro-fitting the valve with a spring. A special disassembly tool is available as an accessory.

Use as foot valve

Together with the strainer, available as an accessory, the check valve can be used as a foot valve. The combination of check valve type 561 or type 562 and strainer is an effective way of protecting a pump from contamination and consequently from damage, while at the same time, preventing the pump from unwanted emptying.

Product Range

The right valve for all requirements and applications

As the number of application possibilities grows, so does the demand for more versatile valves. This is why GF Piping Systems carries different types of non-return valves for pipelines in its product line. Besides the cone check valves type 561 and type 562, the wafer check valve type 369 and the angle-seat check valve type 303 stand out with their individual strengths.

Type	Cone check valve		Angle-seat check valve	Wafer check valve	
	561	562	303	369	
General	Description	union nut mounted	union nut mounted	spigot cemented	wafer-type valve
	Dimension range (DN)	10–100		15–50; 80	32–300
	Pressure rating	PN16/ PN10*		PN10	PN6
	FSpring-assisted (V2A/V4A)**		x		x

Product Selection

The right valve for your application

Choosing the right valve for your application depends largely on the medium conveyed and the functional requirements. Pressure and temperature are key criterias for material selection. Which valve is suitable in relation to these two parameters can be seen in the technical data of the respective valve.

Check valve selection guide

Type		Cone check valve		Angle-seat check valve	Wafer check valve
		561	562	303	369
Medium conveyed	Free of foreign bodies	+	+	+	+
	Containing solids / crystallizing	o/-	o/-	o	+/o
	Viscous	+	+	+/o	+/o
	Gaseous	+	+	o	+
Functional properties	Controllable	x	x	x	x
	Position indicator	x	x	x	x
	Piggable	-	-	-	-
	Tight under vacuum	o/-	o/-	o	+/o
	Can cause pressure surge	o	o	o	o
	Horizontal installation	o	+	+	+
	Spring-assisted	-	+	x	+
	Water hammer resistant	+	+	o/-	o/-
Dimension range (DN)		10-100	10-100	15-50; 80	32-300

+ = recommended
o = conditional use

- = not recommended
x = not possible

Applications

Whether in water treatment, in the chemical process industry or in cooling applications, check valves from Georg Fischer are found wherever reliable performance is required. Due to the wide range of available materials and the high pressure rating of 16 bar (10 bar for PP, ABS), the check valves type 561 and type 562 fulfil the diverse specifications of numerous applications. The valve's self-closing function and quiet operation contribute to your safety and comfort on a daily basis.
