

## How can we claim 0 THC?

Keola's supplier of broad spectrum hemp uses chromatographic purification. This process has been able to selectively remove the only psychoactive component, Delta 9-THC, from the phytocannabinoid-rich hemp oil. The absence of detectable THC is confirmed through High Performance Liquid Chromatography (HPLC) tests and the State of Colorado. This allows us to identify the naturally occurring THC and separate out, instantly, while leaving intact the other synergistic components of the oil. Our supplier (Folium Biosciences) has been certified by the Colorado Department of Public Health and Environment as a producer of 0.0% THC products and has been issued Free Sale Certification.
