

TekTone SF570

Pendant Transmitter with Wristband Option

Description

The SF570 Pendant Transmitter features the great range and reliability of 433 MHz in a small waterproof package. The pendants can be worn in the shower or bathtub, outside in the rain, or other environments where they may be splashed with water or momentarily submerged.

The pendants have a single-button design with "press and one-second hold" activation, making them easy to use but resistant to false alarms. When a pendant is activated its red LED stays solid for five seconds, then blinks slowly until the alarm is cleared. Alarms may be cleared by placing an RP570 Alarm Clearance Card over the button.

The pendant transmitters are especially suited for assisted living installations. They feature a fully supervised RF link to ensure reliability. The built-in LED flashes with all transmissions, including supervision, so the user can see that the transmitter is still functioning.

SF570

Pendant Transmitter with Wristband Option

Features

- Large red call button to trigger calls
- Red LED for call indication
- Includes replaceable BA501 battery
- Includes lanyard with anti-ligature point
- Optional RP571 wristband
