

## 2

## Installation & Setup

Responder Networked Management software allows hospital staff to access Nurse Call reports from any appropriately networked PC. (One dedicated computer is required to continuously log Nurse Call activity data; data can then be transferred to a designated file server via the facility LAN.) Program access must be given to Nursing Managers.

Observe the following procedures when attempting to install the software.

## Responder IV Network Controller

Before attempting to install NCSMSWNET, you must use the R4CONFIG Application and Utility Suite to open the correct database file and establish/verify correct hardware configuration:
