## Important Information

- This bulletin is for information only and should not be relied upon to make future investment decisions.
- It is important to remember that past performance is not a reliable indicator of future performance.
- The prices of accumulation units in the Deposit funds are guaranteed not to fall. The prices of units in the other funds may fall as well as rise and are not guaranteed.
- Utmost Life and Pensions have five risk ratings to help provide an indication of the potential level of risk and reward that is attributed to a fund based on the type of assets which may be held within a fund. Different companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry. You should ensure you are comfortable with the risks associated with any fund you invest in.

### Low risk

Return of capital is the priority ahead of potential growth although your capital is not guaranteed. With low risk funds, it is possible that your investment return will be insufficient to meet your financial goals and may not keep pace with inflation. Potential for low levels of price fluctuation. Growth is likely to be modest.

### Low-to-medium risk

Investments that offer some element of protection from losses alongside the possibility of long-term investment growth or income. The value of your capital could go up or down. With low-to-medium risk funds, it is possible that your investment return will be insufficient to meet your financial goals. Returns may not keep pace with inflation.

### Medium risk

Long-term growth and income are balanced against risk to capital. The value of your capital could go up or down.

### Medium-to-high risk

Long-term growth and income are the priority. The value of your capital could go up or down, potentially by greater amounts than funds in the 'medium' risk category.

### High risk

The greatest potential for capital growth or income. But also the highest risk of capital loss. The value of your capital could go up or down, more frequently and by greater amounts, than lower risk funds.
